Meiosis Developmental And Cell Biology Series:

Meiosis Andrew Swan, 2012-02-29 Meiosis the process of forming gametes in preparation for sexual reproduction has long been a focus of intense study Meiosis has been studied at the cytological genetic molecular and cellular levels Studies in model systems have revealed common underlying mechanisms while in parallel studies in diverse organisms have revealed the incredible variation in meiotic mechanisms This book brings together many of the diverse strands of investigation into this fascinating and challenging field of biology

Meiosis Bernard John, 2005-07-21 This is the first comprehensive review and discussion of meiosis the antithesis of fertilization Meiosis is a special form of nuclear division invented by sexually reproducing eukaryotes to ensure that a correct chromosome complement is maintained over successive generations In this masterly treatment the author describes the scheduling mechanisms biochemistry and the genetic control of the events of meiosis in sexual systems as well as the variants adopted by subsexual forms This will be an essential text for upper division students and research workers in genetics cytology and cell biology

Sexual Plant Reproduction Mauro Cresti, Antonio Tiezzi, 2012-12-06 In recent years there has been a growing awareness of the importance of reproductive biology to crop production and there has been a tremendous increase in research on reproductive structures of higher plants Presented here is a wide information of different aspects of micro and macrosporogenesis pollen stigma interaction and recognition pollen tube growth cytoskeleton in vitro and in vivo gamete fusion and incompatibility The most advanced techniques employed in studies on reproductive biology of higher plants are described in detail

Understanding Ageing Robin Holliday, 1995-01-27 This book presents a completely novel approach to the understanding of ageing which many believe is an unsolved problem in biology It explains why ageing exists in animals and reviews our understanding of it at the biological level This includes a discussion of the origins and evolution of ageing The book is not a review of research on ageing but instead draws on material from a wide range of disciplines including the very extensive biomedical information about age related diseases in humans Understanding Ageing argues that much research needs to be done on the cellular and molecular aspects of ageing if the origins of these diseases are to be understood and their prevention made possible This thought provoking book will appeal to all students and researchers who are interested in ageing whether they are working in the clinical or basic research sphere

Meiosis in Development and Disease, 2023-01-16 Meiosis in Development and Disease Volume 151 in the Current Topics in Developmental Biology series highlights new advances in the field with this new volume presenting interesting chapters on topics such as The initiation stages of meiosis The molecular basis and dynamics of meiotic cohesions and their significance in human infertility Chromatin recombination and the centromeres Sites and structures that mediate segregation when crossing over calls out sick Life or at Least Meiosis Without Crossing Over Crossover maturation inefficiency Non coding RNA mediated gene regulation in meiosis Short chromosomes in meiotic recombination Chromatin level changes during meiosis initiation vs oncogenesis and much more Other sections of note include Chromosomal

speciation revisited Meiotic recombination and synapsis of evolutionary diverged homologs Recombination suppression at specific chromosome regions Unwinding during stressful times mechanisms of helicases in meiotic recombination Meiotic functions of PCH 2 TRIP13 and HORMADs Crossover interference Checkpoint control in meiotic prophase Idiosyncratic demands require unique characteristics The breadth of meiotic drive genes and mechanisms across the tree of life and many more interesting topics Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Current Topics in Developmental Biology series Updated release includes the latest information on the Meiosis in Development and Disease

Dictyostelium Richard H. Kessin, 2001-01-11 Dictyostelia are soil amoebae capable of extraordinary feats of survival motility chemotaxis and development Characterised by their ability to transform from a single celled organism into an elaborate assemblage of thousands of synchronously moving cells Dictyostelids are often referred to as social amoebae and have been the subjects of serious study since the 1930s Research in this area has been instrumental in understanding many problems in cellular biology Beginning with the history of Dictyostelids and discussing each stage of their development this book considers the evolution of this unique organism analyses the special properties of the Dictyostelid genome and presents in detail the methods available at the time of the book's original publication in 2001 to manipulate their genes Representing the synthesis of such material and with an emphasis on combining classical experiments with modern molecular findings this book will be essential for researchers and graduates in developmental and cellular biology

Cell Biology of Olfaction Albert I. Farbman, 1992-10-30 The sense of smell is probably the most important sense to a large number of the animal species on Earth and the aim of the study of olfactory cell biology is to understand the cellular basis on which olfactory driven behaviour is based In this book the author presents a critical analysis of what is known about the olfactory sensory cells in both the nasal cavity and the vomeronasal organ Although the emphasis is on mammalian olfaction basic issues that have been addressed by research on other vertebrates and invertebrates are also discussed Throughout the book the premise is that we can only more thoroughly comprehend normal behaviour and dysfunction once we have a detailed understanding of the cells and tissues involved in the sense of smell

Biology and Pathology of the Oocyte Alan O. Trounson, Roger G. Gosden, 2003-07-10 The human oocyte or egg is the rarest and most rapidly ageing cell in the body and yet one that is essential for fertility This book is about the development biology and pathology of the oocyte and new technologies to manipulate enhance and control fertility These technologies are paving the way for overcoming infertility avoiding inherited diseases and creating genetically engineered animals from embryo stem cells and cloning This progress would have been impossible without the myriad of scientific and technical developments covered in this book including the ability to manipulate and fertilize oocytes in vitro World leading experts have contributed to the first book for many years on basic and applied science of the egg its clinical manipulation and its pivotal role in reproductive medicine and biology It will be an essential reference for scientists and clinicians in

reproductive medicine and animal breeding technology and everyone involved in treating infertility

Kinetic Theory of Living Pattern Lionel G. Harrison, 2005-09-15 Discusses the development of the shapes of living organisms and their parts in a field of science in which there are no generally accepted theoretical principles

Cytokinesis in Animal Cells R. Rappaport, 1996-10-28 This book traces the history of the major ideas and gives an account of our current knowledge of cytokinesis

Fungal Morphogenesis David Moore, 1998 Fungal Morphogenesis brings together for the first time the full scope of fungal developmental biology

Volvox David L. Kirk, 1998 This book reviews Volvox development and biology and through this study sheds light on the origins of multicellularity

Limb Regeneration Panagiotis A. Tsonis, 1996-07-13 This is the first book that analyses the mechanisms of limb regeneration by incorporating the information obtained from older experiments with the many new recent advances in molecular and cellular biology

Hormones, Signals and Target Cells in Plant Development Daphne J. Osborne, Michael T. McManus, 2005-04-11 Meristematic cells in plants become the many different types of cells found in a mature plant This is achieved by a selective response to chemical signals both from neighbouring cells and distant tissues It is these responses that shape the plant its time of flowering the sex of its flowers its length of survival or progress to senescence and death How do plants achieve this This treatise addresses this question using well chosen examples to illustrate the concept of target cells The authors discuss how each cell has the ability to discriminate between different chemical signals determining which it will respond to and which it will ignore The regulation of gene expression through signal perception and signal transduction is at the core of this selectivity and the Target Cell concept This volume will serve as a valuable reference for all researchers working in the field of plant developmental biology

National Library of Medicine Current Catalog National Library of Medicine (U.S.),

Gravity and the Behavior of Unicellular Organisms Donat-Peter Häder, Ruth Hemmersbach, Michael Lebert, 2005-01-17 Unicellular organisms use gravity as an environmental guide to reach and stay in regions optimal for their growth and reproduction These single cells play a significant role in food webs and these factors together make the effects of gravity on unicellular organisms a fascinating and important subject for scientific study In addition they present valuable model systems for studying the mechanisms of gravity perception a topic of increasing interest in these days of experimentation in space This book reveals how single cells achieve the same sensoric capacity as multicellular organisms like plants or animals It reviews the field discussing the historical background ecological significance and related physiology of unicellular organisms as well as various experimental techniques and models with which to study them Those working on the biology of unicellular organisms as well as in related areas of gravitational and space science will find this book of value

The Neural Crest Nicole Le Douarin, Chaya Kalcheim, 1999-11-28 This 1999 edition of The Neural Crest contains comprehensive information about the neural crest a structure unique to the vertebrate embryo which has only a transient existence in early embryonic life The ontogeny of the neural crest embodies the most important issues in developmental biology as the neural crest is considered to have played a

crucial role in evolution of the vertebrate phylum Data that analyse neural crest ontogeny in murine and zebrafish embryos have been included in this revision This revised edition also takes advantage of recent advances in our understanding of markers of neural crest cell subpopulations and a full chapter is now devoted to cell lineage analysis The major research breakthrough since the first edition has been the introduction of molecular biology to neural crest research enabling an elucidation of many molecular mechanisms of neural crest development This book is essential reading for students and researchers in developmental biology cell biology and neuroscience *Echinoderms Part B*, 2019-04-02 Echinoderms Volume 151 the latest release in the Methods in Cell Biology series highlights advances in the field with this update presenting chapters on Echinoderm Genome Databases analysis of gene regulatory networks using ATAC seq and RNA seq to increase resolution in GRN connectivity multiplex cis regulatory analysis experimental approaches GRN signal pathways BACs analysis of chromatin accessibility using ATAC seq analysis of sea urchin proteins Click IT CRISPR Cas9 mediated genome editing in sea urchins super resolution and in toto imaging of echinoderm embryos and methods for analysis of intracellular ion signals in sperm eggs and embryos Presents clear concise protocols provided by experts who have established the echinoderms as a model systems Highlights new advances in the field with this update presenting interesting chapters on echinoderms Cytobios, 1992 Analysis of Growth and Development in Xanthium Roman Maksymowych, James O. Brooks, Frank B. Salisbury, 1990-05-10

Unveiling the Magic of Words: A Overview of "**Meiosis Developmental And Cell Biology Series**"

In a global defined by information and interconnectivity, the enchanting power of words has acquired unparalleled significance. Their power to kindle emotions, provoke contemplation, and ignite transformative change is really awe-inspiring. Enter the realm of "**Meiosis Developmental And Cell Biology Series**," a mesmerizing literary masterpiece penned with a distinguished author, guiding readers on a profound journey to unravel the secrets and potential hidden within every word. In this critique, we shall delve in to the book is central themes, examine its distinctive writing style, and assess its profound affect the souls of its readers.
