Membrane Mediated Information Vol 1 Biochemical Functions:

Membrane Glycoproteins R. Colin Hughes, 2014-05-20 *Membrane Glycoproteins A Review of Structure and Function* deals with membrane glycoproteins found in biological systems The book describes the structure and biosynthesis of the glycoproteins in relation to known or postulated functions in membranes The text opens with an introduction and a topic on detection and distribution of membrane glycoproteins The book then notes that the isolation of membrane glycoproteins brought by the progress in research and technology of membrane solubilization and purification of the soluble components is now possible Discussion is also directed to glycoproteins as being integral components of intracellular membranes and not just located on cell surfaces Through the structural analysis of glycoproteins produced by the secretory glands analysis of human blood group antigens is available Likewise discoveries are made explaining that lectins are useful reagents in detecting the type and numbers of glycoproteins found on cellular members Lectins are likewise being widely used in tests for carbohydrate containing substances in membrane mediated processes The metabolism growth control and cell surface reactions of membrane glycoproteins are also explained The book can serve as a guide for biologists chemists biochemists and academicians interested in the study of membranes or glycoproteins **Hemopoietic Dysplasias (Preleukemic**

States) M. Bessis, G. Brecher, 2012-12-06 *Intramural Research Program, Fiscal Year 1974* National Cancer Institute (U.S.). Division of Cancer Biology and Diagnosis, 1974 Methods in Membrane Biology Edward D. Korn, 2012-12-06 Volume 3 continues the approach carried out in the first two volumes of this series of publishing articles on membrane methodology which include in addition to procedural details incisive discussions of the applications of the methods and of their limitations What is the theoretical basis of the method how and to what problems can it be applied how does one interpret the results what has thus far been achieved by the method what lies in the future these are the questions the authors have tried to answer No area of membrane biology engages the interest of more investigators than studies of the plasma membrane Four chapters in this volume are concerned with one or more aspects of the cell surface Fundamental to all studies of the cell surface are the isolation and characterization of pure plasma membranes Many preparations described in the literature are inadequate or are inadequately characterized In the first chapter Neville discusses the theoretical and practical bases of tissue fractionation emphasizes the variations in enzyme content among plasma membranes from different sources offers guidance in the choice of the proper criteria for assessing membrane purity and suggests the best markers for detecting the possible presence of contaminating organelles To review in detail each of the many preparations of plasma membranes that have been published is impossible **Federation Proceedings** Federation of American Societies for Experimental Biology, 1962 Biological Roles of Sialic Acid Abraham Rosenberg, 2013-11-11 There is a startling amount of research activity concerning the role of sialic acid in mammalian cells and in the mammalian organism One may discern in the early literature premonitions of compounds containing sialic acid traceable by descriptions of color reactions as far back as the

turn of the century Work spanning the 1930s to the 1950s culminated in the crystallization of sialic acid from a wide variety of biological materials The ubiquitous nature of the sialic acids and the biological importance of the substances in which they occur then became generally manifest Since then the chemistry and metabolism of sialic acid and its occurrence notably but not exclusively in the outer cell surfaces of mammalian cells and in key extracellular glycoproteins have received great attention The involvement of sialic acid containing substances in tumorigenicity and in numerous metabolic and infectious pathological conditions and in the growth development and integrity of mammalian cells has achieved widespread recognition Intensive inquiry into the biological roles of sialic acid continues in a large number of research laboratories throughout the world This book is intended to represent for the uninitiated as well as for the expert a wide and detailed overview of the current state of knowledge Major efforts and pioneering breakthroughs have emerged from several laboratories located on both sides of the Atlantic of which we make no special individual mention here since they will to some extent appear in the pages that follow

Molecular Mechanisms of Membrane Fusion Shinpei Ohki, 2012-12-06 Membrane fusion is an important molecular event which plays a pivotal role in many dynamic cellular processes such as exocytosis endocytosis membrane biogenesis fertilization etc While many reports on the physico

chemical process involved in membrane fusion have appeared in the literature and much information has accumulated there has been no comprehensive meeting of workers in the field A recent symposium which took place at the Center for Tomorrow State University of New York at Buffalo New York April 27-29 1987 was the first meeting of its kind to specifically address the molecular mechanisms of membrane fusion The Symposium consisted of oral workshop and poster presentation sessions The papers presented in the oral and workshop sessions are collected here and arranged approximately in the order presented at the Symposium These papers are the most up to date and representative work at the forefront of each aspect of membrane fusion Although the readers may find some differences in interpretations regarding the molecular mechanisms of membrane fusion there is an overall consensus that increased hydrophobicity and dehydration of the membrane surface are essential physicochemical factors for membrane fusion to occur We trust that these papers will contribute to your further understanding of the mechanisms of membrane fusion

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance, J.E. Vance, 1996-08-06 This is the third edition of this advanced textbook written with two major objectives in mind One is to provide an advanced textbook covering the major areas in the fields of lipid lipoprotein and membrane biochemistry and molecular biology The second objective is to provide a clear summary of these research areas for scientists presently working in these fields The volume provides the basis for an advanced course for students in the biochemistry of lipids lipoproteins

and membranes The book will satisfy the need for a general reference and review book for scientists studying lipids proteins and membranes Excellent up to date reviews are available on the various topics covered A current readable and critical summary of these areas of research it will allow scientists to become familiar with recent developments related to their own research interests and will help clinical researchers and medical students keep abreast of developments in basic science that are important for subsequent clinical advances

Catecholamines and Heart Disease Pallab K. Ganguly, 1991-07-24 A concise in depth analysis of the status of the sympathetic system in heart diseases This book summarizes the functional status of the sympathetic neural system in cardiological diseased states and highlights aspects of sympathetic neural activity that are important to an overall understanding of the pathophysiology process Critical reviews of methods for evaluating sympathetic activity are discussed existing data is closely scrutinized and attempts are made to delineate the factors derived from increased sympathetic activity The book provides a physiologically and clinically based approach to the investigation of the involvement of catecholamines in cardiovascular diseases which makes it a valuable addition to the reference collections of researchers clinical scientists and graduate students

Annals of Immunology ,1974 *Ion Channel Reconstitution* C. Miller, 2013-11-09 It is now over 30 years since the idea of ion conducting pores burst on the electrophysiological scene 15 years since these were generally realized to be membrane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state the nicotinic acetylcholine receptor the Na channel mitochondrial VDAC and a variety of porins The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure This is always a daunting task all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's Single Channel Recording I have tried to present a view of the current landscape of ion channel reconstitution These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work
