

LOSING PATIENCE

Once Patience Merriman had been the toast of Oxford. But now the professor's aging widow is confined to a wheelchair, and she aims her bitterness at anyone within range. She ridicules her daughter Romola. She schemes to destroy the romance between the two young students boarding upstairs. And her latest ploy is promoting the scurrilous suggestion that her own daughter intends to do her in. Once the accusation is made, though, she wonders if she's made a mistake. This suggestion might be too good to pass up ...

Backdoor Attacks against Learning-Based Algorithms Shaofeng Li, Haojin Zhu, Wen Wu, Xuemin (Sherman) Shen, 2024-05-29 This book introduces a new type of data poisoning attack dubbed backdoor attack In backdoor attacks an attacker can train the model with poisoned data to obtain a model that performs well on a normal input but behaves wrongly with crafted triggers Backdoor attacks can occur in many scenarios where the training process is not entirely controlled such as using third party datasets third party platforms for training or directly calling models provided by third parties Due to the enormous threat that backdoor attacks pose to model supply chain security they have received widespread attention from academia and industry This book focuses on exploiting backdoor attacks in the three types of DNN applications which are image classification natural language processing and federated learning Based on the observation that DNN models are vulnerable to small perturbations this book demonstrates that steganography and regularization can be adopted to enhance the invisibility of backdoor triggers Based on image similarity measurement this book presents two metrics to quantitatively measure the invisibility of backdoor triggers The invisible trigger design scheme introduced in this book achieves a balance between the invisibility and the effectiveness of backdoor attacks In the natural language processing domain it is difficult to design and insert a general backdoor in a manner imperceptible to humans Any corruption to the textual data e g misspelled words or randomly inserted trigger words sentences must retain context awareness and readability to human inspectors This book introduces two novel hidden backdoor attacks targeting three major natural language processing tasks including toxic comment detection neural machine translation and question answering depending on whether the targeted NLP platform accepts raw Unicode characters The emerged distributed training framework i e federated learning has advantages in preserving users privacy It has been widely used in electronic medical applications however it also faced threats derived from backdoor attacks This book presents a novel backdoor detection framework in FL based e Health systems We hope this book can provide insightful lights on understanding the backdoor attacks in different types of learning based algorithms including computer vision natural language processing and federated learning The systematic principle in this book also offers valuable guidance on the defense of backdoor attacks against future learning based algorithms
