Principles Of Geochemical Prospecting:

Principles of Geochemical Prospecting I. I. Ginzburg, 2013-10-02 International Series of Monographs on Earth Sciences Volume 3 Principles of Geochemical Prospecting Techniques of Prospecting for Non Ferrous Ores and Rare Metals covers the developments of theoretical premises of geochemical prospecting based on existing theories of endogenic and exogenic ore formation This volume is divided into 13 chapters and begins with a presentation of the problems originating in geochemical prospecting The next chapters evaluate the relative importance of different prospecting methods Considerable chapters are devoted to a generalized view of prospecting work in different geologic pedologic climatic and orographic environments The remaining chapters are concerned with the clarification and an explanation of certain regularities which could serve as the basis of a rational orientation of geochemical prospecting This book is an invaluable source for geochemical prospectors geologists and geophysicists *Principles of Geochemical Prospecting* Herbert Edwin Hawkes, 1957 Principles of

Reedman, 2012-12-06 For some years I have felt there was a need for a single comprehensive reference book on exploration geology Numerous textbooks are available on subjects such as geophysical prospecting exploration geochemistry mining geology photogeology and general economic geology but for the geologist working in mineral exploration who does not require a specialist's knowledge a general book on exploration

techniques is needed Many undergraduate university courses tend to neglect economic geology and few deal with the more practical aspects in any detail Graduate geologists embarking on a career in economic geology or mineral exploration are therefore often poorly equipped and have to learn a considerable amount on the job By providing a book that includes material which can be found in some of the standard texts together with a number of practical aspects not to be found elsewhere I hope that both recent graduates and more experienced exploration geologists will find it a useful reference work and manual In addition students of economic geology and personnel working in related fields in the mining and mineral extraction industries will find it informative J H REEDMAN v Acknowledgements The author would like to thank Dr K Fletcher geochemist with the Department of Geology University of British Columbia and Kari Savario geophysicist with Finnish Technical Aid to Zambia for reading the original drafts and offering constructive criticism and advice on the chapters on geochemical and geophysical prospecting respectively
