*Priorities for Health Promotion and Public Health* Sally Robinson, 2021-03-30 *Priorities for Health Promotion and Public Health* brings together the evidence behind the UK's public health priorities into one comprehensible textbook. Taking one theme per chapter, the book examines the social and environmental influences that shape people's health: health inequalities, poverty and health, mental, emotional and spiritual health, sexual health, physical inactivity, diet, tobacco, alcohol, drugs, weight, cardiovascular disease, cancer, diabetes, and dementia. The book takes a holistic approach, combining scientific and epidemiological evidence with the subjective experiences of those who undergo these health journeys. Each chapter explains the causes of poor health and the evidence behind the recommendations for good health and ends by demonstrating the health benefits of positive action. This is a core text for those studying health promotion or public health and a supplementary text for students of healthcare and social care. The book focusses on adults' health in the UK with examples from the four nations and provides some contextual international information where relevant. *Priorities for Health Promotion and Public Health* is an ideal companion for busy practitioners who work across the wider sectors that support people's health and wellbeing. It is also an essential textbook for students new to health promotion and public health.

**Linking Research and Public Health Practice** Institute of Medicine, Committee to Review the CDC Centers for Research and Demonstration of Health Promotion and Disease Prevention, 1997-01-31 Health promotion and disease prevention are central priorities in the Centers for Disease Control and Prevention. To advance research in these areas, Congress authorized and CDC established a program of university-based Centers for Research and Demonstration of Health Promotion and Disease Prevention to explore improved ways of appraising health hazards and to serve as demonstration sites for new and innovative research in public health. Begun in 1986 with three centers, there are now fourteen. In response to a CDC request to evaluate the program, *Linking Research and Public Health Practice* examines the vision for the prevention research centers program, the projects conducted by the centers, and the management and oversight of the program. In conducting the evaluation, the IOM committee took a broad view of how prevention research can influence the health of communities and considered both the proximal risk factors for disease prevention and the more distal conditions for health promotion and improved equity in the distribution of risk factors.
