Rings Homology:

Foundations of Commutative Rings and Their Modules Fanggui Wang, Hwankoo Kim, 2024-09-02 This book provides an introduction to the foundations and recent developments in commutative algebra. A look at the contents of the first five chapters shows that the topics covered are those usually found in any textbook on commutative algebra. However, this book differs significantly from most commutative algebra textbooks, namely in its treatment of the Dedekind-Mertens formula, the small finitistic dimension of a ring, Gorenstein rings, valuation overrings, the valuative dimension, and the Nagata rings. Chapter 6 goes on to present w modules over commutative rings as they are most commonly used in torsion theory and multiplicative ideal theory. Chapter 7 deals with multiplicative ideal theory over integral domains. Chapter 8 collects various results of pullbacks, especially Milnor squares and D - M constructions, which are probably the most important example-generating machines. In Chapter 9, coherent rings of finite weak global dimensions are probed, and the local ring of weak global dimension two is elaborated by combining homological tricks and methods of star operation theory. Chapter 10 is devoted to the Grothendieck group of a commutative ring. In particular, the Bass-Quillen problem is discussed. Finally, Chapter 11 introduces relative homological algebra, especially where the related notions of integral domains appearing in classical ideal theory are defined and studied using the class of Gorenstein projective modules. In Chapter 12, in this new edition, properties of cotorsion theories are introduced and show for any cotorsion pair how to construct their homology theory. Each section of the book is followed by a selection of exercises of varying difficulty. This book appeals to a wide readership from graduate students to academic researchers interested in studying commutative algebra.

Noncommutative Rings Susan Montgomery, Lance Small, 2012-12-06 This volume collects some of the survey lectures delivered at the Micro program on Noncommutative Rings held at MSRI, July 10-21, 1989. While the program was concerned with recent advances in ring theory, it also had as an important component lectures on related areas of mathematics where ring theory might be expected to have an impact. Thus there are lectures of S. P. Smith on quantum groups and Marc Rieffel on algebraic aspects of quantum field theory. Martin Lorenz and Donald Passman consider in their lectures various aspects of crossed products, homological and K-theoretic to group actions. Kenneth Brown presents the modern theory of Noetherian rings and localization. These contributions, as well as the others not presented here, show that ring theory remains a vigorous and useful area. The planning and organization of the program were done by the undersigned and the late Robert Warfield. His illness prevented his attendance at the meeting. It is to him we dedicate this volume. The organizers wish to extend their thanks to Irving Kaplansky, Director of MSRI, and the staff for all of their efforts in making this conference such a success.

Homology Theory P. J. Hilton, S. Wylie, 1967 This account of algebraic topology is complete in itself assuming no previous knowledge of the subject It is used as a textbook for students in the final year of an undergraduate course or on graduate courses and as a handbook for mathematicians in other branches who want some knowledge of the subject **Homological**

Algebra Henri Cartan, Samuel Eilenberg, 2016-06-02 When this book was written methods of algebraic topology had caused revolutions in the world of pure algebra To clarify the advances that had been made Cartan and Eilenberg tried to unify the fields and to construct the framework of a fully fledged theory The invasion of algebra had occurred on three fronts through the construction of cohomology theories for groups Lie algebras and associative algebras This book presents a single homology and also cohomology theory that embodies all three a large number of results is thus established in a general framework Subsequently each of the three theories is singled out by a suitable specialization and its specific properties are studied The starting point is the notion of a module over a ring The primary operations are the tensor product of two modules and the groups of all homomorphisms of one module into another From these higher order derived operations are obtained which enjoy all the properties usually attributed to homology theories This leads in a natural way to the study of functors and of their derived functors This mathematical masterpiece will appeal to all mathematicians working in algebraic topology

Rings, Modules, and Algebras in Stable Homotopy Theory Anthony D. Elmendorf, 1997 This book introduces a new point set level approach to stable homotopy theory that has already had many applications and promises to have a lasting impact on the subject Given the sphere spectrum S the authors construct an associative commutative and unital smash product in a complete and cocomplete category of S modules whose derived category is equivalent to the classical stable homotopy category This construction allows for a simple and algebraically manageable definition of S algebras and commutative S algebras in terms of associative or associative and commutative products $R \wedge SR \rightarrow R$ These notions are essentially equivalent to the earlier notions of A-infty and E-infty ring spectra and the older notions feed naturally into the new framework to provide plentiful examples There is an equally simple definition of R modules in terms of maps $R \wedge SM \rightarrow M$ When R is commutative the category of R modules also has a *The Local Structure of Algebraic K-Theory* Bjørn Ian Dundas, Thomas G. Goodwillie, Randy McCarthy, 2012-09-06 Algebraic K theory encodes important

invariants for several mathematical disciplines spanning from geometric topology and functional analysis to number theory and algebraic geometry As is commonly encountered this powerful mathematical object is very hard to calculate Apart from Quillen s calculations of finite fields and Suslin s calculation of algebraically closed fields few complete calculations were available before the discovery of homological invariants offered by motivic cohomology and topological cyclic homology This book covers the connection between algebraic K theory and B kstedy Hsiang and Madsen s topological cyclic homology and proves that the difference between the theories are locally constant The usefulness of this theorem stems from being more accessible for calculations than K theory and hence a single calculation of K theory can be used with homological calculations to obtain a host of nearby calculations in K theory For instance Quillen s calculation of the K theory of finite fields gives rise to Hesselholt and Madsen s calculations for local fields and Voevodsky s calculations for the integers give insight into the diffeomorphisms of manifolds In addition to the proof of the full integral version of the local correspondence between K theory and topological cyclic homology the book provides an introduction to the necessary background in algebraic K theory and highly structured homotopy theory collecting all necessary tools into one common framework It relies on simplicial techniques and contains an appendix summarizing the methods widely used in the field The book is intended for graduate students and scientists interested in algebraic K theory and presupposes a basic knowledge of algebraic topology

Rings and Homology James P. Jans, 2015-01-14 Geared toward those who have completed a college course in basic algebra and seek an introduction to ring structure and homological algebra this concise text is suitable for advanced undergraduate and graduate students 1964 edition Women in Commutative Algebra Claudia Miller, Janet Striuli, Emily E. Witt, 2022-03-18

This volume features contributions from the Women in Commutative Algebra WICA workshop held at the Banff International Research Station BIRS from October 20 25 2019 run by the Pacific Institute of Mathematical Sciences PIMS The purpose of this meeting was for groups of mathematicians to work on joint research projects in the mathematical field of Commutative Algebra and continue these projects together long distance after its close The chapters include both direct results and surveys with contributions from research groups and individual authors The WICA conference was the first of its kind in the large and vibrant area of Commutative Algebra and this volume is intended to showcase its important results and to encourage further collaboration among marginalized practitioners in the field It will be of interest to a wide range of researchers from PhD students to senior experts

Advances in Noncommutative Geometry Ali Chamseddine, Caterina Consani, Nigel Higson, Masoud Khalkhali, Henri Moscovici, Guoliang Yu, 2020-01-13 This authoritative volume in honor of Alain Connes the foremost architect of Noncommutative Geometry presents the state of the art in the subject The book features an amalgam of invited survey and research papers that will no doubt be accessed read and referred to for several decades to come The pertinence and potency of new concepts and methods are concretely illustrated in each contribution Much of the content is a direct outgrowth of the Noncommutative Geometry conference held March 23 April 7 2017 in Shanghai China

The conference covered the latest research and future areas of potential exploration surrounding topology and physics number theory as well as index theory and its ramifications in geometry [Link Theory in Manifolds](#) Uwe Kaiser,2006-11-14 Any topological theory of knots and links should be based on simple ideas of intersection and linking In this book a general theory of link bordism in manifolds and universal constructions of linking numbers in oriented 3 manifolds are developed In this way classical concepts of link theory in the 3 spheres are generalized to a certain class of oriented 3 manifolds submanifolds of rational homology 3 spheres The techniques needed are described in the book but basic knowledge in topology and algebra is assumed The book should be of interest to those working in topology in particular knot theory and low dimensional topology **Elements Of Algebraic Topology** James R. Munkres,2018-03-05 Elements of Algebraic Topology provides the most concrete approach to the subject With coverage of homology and cohomology theory universal coefficient theorems Kunneth theorem duality in manifolds and applications to classical theorems of point set topology this book is perfect for communicating complex topics and the fun nature of algebraic topology for beginners *Homotopy Theory* I. M. James,2014-05-09 Homotopy Theory contains all the published mathematical work of J H C Whitehead written between 1947 and 1955 This volume considers the study of simple homotopy types particularly the realization of problem for homotopy types It describes Whitehead's version of homotopy theory in terms of CW complexes This book is composed of 21 chapters and begins with an overview of a theorem to Borsuk and the homotopy type of ANR The subsequent chapters deal with four dimensional polyhedral the homotopy type of a special kind of polyhedron and the combinatorial homotopy I and II These topics are followed by reviews of other homotopy types such as group extensions with homotopy operators cohomology systems secondary boundary operator algebraic homotopy and the G dual of a semi exact couple The last chapters examine the connected complex homotopy types and the second non vanishing homotopy groups This book will be of great value to mathematicians *Commutative Algebra* Irena Peeva,2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted Algebraist David Eisenbud's 65th birthday It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Category Theory Combinatorics Computational Algebra Homological Algebra Hyperplane Arrangements and Non commutative Algebra The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research *Topology and Markets* Graciela Chichilnisky, This volume presents the proceedings of a workshop on geometry topology and markets held at The Fields Institute The workshop was attended by eminent mathematicians and financial and economic theorists Using a topological approach the volume discusses new mathematics and its applications to

History of Topology I.M. James, 1999-08-24 Topology for many years has been one of the most exciting and influential fields of research in modern mathematics Although its origins may be traced back several hundred years it was Poincaré who gave topology wings in a classic series of articles published around the turn of the century While the earlier history sometimes called the prehistory is also considered this volume is mainly concerned with the more recent history of topology from Poincaré onwards As will be seen from the list of contents the articles cover a wide range of topics Some are more technical than others but the reader without a great deal of technical knowledge should still find most of the articles accessible Some are written by professional historians of mathematics others by historically minded mathematicians who tend to have a different viewpoint Operads: Proceedings of Renaissance Conferences Jean-Louis Loday, 1997
