Columbia Law Review, 1927 The Oxford Handbook of Offender Decision Making Wim Bernasco, Henk Elffers, Jean-Louis van Gelder, 2017-05-08 Although the issue of offender decision making pervades almost every discussion of crime and law enforcement only a few comprehensive texts cover and integrate information about the role of decision making in crime The Oxford Handbook of Offender Decision Making provide high quality reviews of the main paradigms in offender decision making such as rational choice theory and dual process theory It contains up to date reviews of empirical research on decision making in a wide range of decision types including not only criminal initiation and desistance but also choice of locations times targets victims methods as well as large variety crimes including homicide robbery domestic violence burglary street crime sexual crimes and cybercrime Lastly it provides in depth treatments of the major methods used to study offender decision making including experiments observation studies surveys offender interviews and simulations Comprehensive and authoritative the Handbook will quickly become the primary source of theoretical methodological and empirical knowledge about decision making as it relates to criminal behavior *Computational Finance* Francesco Cesarone, 2020-06-11 Computational finance is increasingly important in the financial industry as a necessary instrument for applying theoretical models to real world challenges Indeed many models used in practice involve complex mathematical problems for which an exact or a closed form solution is not available Consequently we need to rely on computational techniques and specific numerical algorithms This book combines theoretical concepts with practical implementation Furthermore the numerical solution of models is exploited both to enhance the understanding of some mathematical and statistical notions and to acquire sound programming skills in MATLAB which is useful for several other programming languages also The material assumes the reader has a relatively limited knowledge of mathematics probability and statistics Hence the book contains a short description of the fundamental tools needed to address the two main fields of quantitative finance portfolio selection and derivatives pricing Both fields are developed here with a particular emphasis on portfolio selection where the author includes an overview of recent approaches The book gradually takes the reader from a basic to medium level of expertise by using examples and exercises to simplify the understanding of complex models in finance giving them the ability to place financial models in a computational setting The book is ideal for courses focusing on quantitative finance asset management mathematical methods for economics and finance investment banking and corporate finance

Gaining Momentum Joseph Tidd, 2010 Diffusion or the widespread adoption of innovations is a critical yet under researched topic There is a wide gap between development and successful adoption of an innovation Therefore a better understanding of why and how an innovation is adopted can help develop realistic management and business plans Most books on this topic use a single discipline approach to explain the diffusion of innovations This book adopts a multi disciplinary and managerial process approach to understanding and promoting the adoption of innovations based on the

latest research and practice It will be of interest to graduates and researchers in marketing product development and innovation courses
