Sharing The Work Sparing The Planet Work Time Reduction Consumption And The Environment:

Sharing the Work, Sparing the Planet Anders Hayden,1999 This text argues that work time reduction can contribute to reducing ecological stress by emphasising free time over material consumption The book explores the obstacles and key questions and describes the numerous practical attempts to begin translating the idea into reality Capitalism and the Political Economy of Work Time Christoph Hermann,2014-10-17 John Maynard Keynes expected that around the year 2030 people would only work 15 hours a week In the mid 1960s Jean Fourasti still anticipated the introduction of the 30 hour week in the year 2000 when productivity would continue to grow at an established pace Productivity growth slowed down somewhat in the 1970s and 1980s but rebounded in the 1990s with the spread of new information and communication technologies The knowledge economy however did not bring about a jobless future or a world without work as some scholars had predicted With few exceptions work hours of full time employees have hardly fallen in the advanced capitalist countries in the last three decades while in a number of countries they have actually increased since the 1980s This book takes the persistence of long work hours as starting point to investigate the relationship between capitalism and work time It does so by discussing major theoretical schools and their explanations for the length and distribution of work hours as well as tracing major changes in production and reproduction systems and analyzing their consequences for work hours Furthermore this volume explores the struggle for shorter work hours starting from the introduction of the ten hour work day in the nineteenth century to the introduction of the 35 hour week in France and Germany at the end of the twentieth century However the book also shows how neoliberalism has eroded collective work time regulations and resulted in an increase and polarization of work hours since the 1980s Finally the book argues that shorter work hours not only means more free time for workers but also reduces inequality and improves human and ecological sustainability The Barcelona School of Ecological Economics and Political Ecology Sergio Villamayor-Tomas,Roldan Muradian,2023-02-28 In this open access book ecological economics and political ecology traditions converge into a single academic school The book constitutes a common ground where multiple and critical voices are expressed covering a broad scope of urgent matters at the crossroad between society economy and the natural environment The manuscripts composing this compendium offer appealing material for both experienced and younger researchers interested in interdisciplinary exchanges in the field of the social environmental sciences It combines historical accounts with recent theoretical and empirical developments revolving around the interaction between three foundational notions of the Barcelona School social metabolism environmental justice and self reflective science Post-Growth Work Irmi Seidl,Angelika Zahrnt,2021-09-08 This book argues that society must rethink the notion of formal employment and instead introduce and spread the notion of meaningful work so that societies can become independent of economic growth The excessive consumption of natural resources and the immense emissions resulting from our growth oriented economic system surpass the planetary boundaries Despite this society and the economy still strive for

economic growth in order to generate jobs to finance the social security system and to assure tax income. However, these expectations are increasingly unrealistic, not least because technological developments such as digitalisation and robotisation will change and limit formal employment opportunities as well. Against this backdrop, the book introduces the notion of meaningful activities that embrace various kinds of work paid and unpaid, sequential or in parallel, which are meaningful for the worker as well as society as a whole. At the same time, the authors argue in favour of reduced working time in formal employment. Furthermore, the book also describes the necessary transformations in companies and for consumers for social and tax systems for social services and agriculture. Innovative and timely, this book will be a key resource for professionals and scholars interested in sustainability, economics, work transformation and post-growth studies. *Monthly Labor Review*, 2001. Publishes in depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews. *Rethinking Climate and Energy Policies* Tilman Santarius, Hans Jakob Walnum, Carlo Aall, 2016-08-18. This book calls for rethinking current climate energy and sustainability policy making by presenting new insights into the rebound phenomenon, i.e. the driving forces, mechanisms and extent of rebound effects and potential means of mitigating them. It pursues an innovative and novel approach to the political and scientific rebound discourse and hence supplements the current state of knowledge discussed in the field of energy economics and recent reports by the Intergovernmental Panel on Climate Change. Building on central rebound publications from the past four decades, this book is divided into three main sections. Part I highlights new aspects of rebound economics by presenting insights into issues that have so far not been satisfactorily researched, such as rebounds in countries of the Global South, rebounds on the producer side and rebounds from sufficiency behaviour as opposed to rebounds from technical efficiency improvements. In turn, Part II goes beyond conventional economic rebound research, exploring multidisciplinary perspectives on the phenomenon in particular from the fields of psychology and sociology. Advancing such multidisciplinary perspectives delivers a more comprehensive understanding of rebound's driving forces, mechanisms and policy options. Part III puts rebounds into practice and presents several policy cases and sector-specific approaches, including the contexts of labour markets, urban planning, tourism, information and communication technologies and transport. Lastly, the book embeds the issue into the larger debate on decoupling green growth and degrowth and identifies key lessons learned for sustainable development strategies and policies at large. By employing such varied and in-depth analyses, the book makes an essential contribution to the discussion of the overall question: Can resource energy use and greenhouse gas emissions be substantially reduced without hindering economic growth? **A Research Agenda for Sustainable Consumption Governance** Oksana Mont, p. 1. margin 0 0px 0 0px font 10 0px Arial. Evaluating achievements, challenges and future avenues for research, this book explores how new dimensions of knowledge and practice contest, reshape and advance traditional understandings of sustainable consumption governance. *Ideas for Action* Cynthia Kaufman, 2016-07-01. Getting Past Capitalism Cynthia Kaufman,2012-08-25 Getting Past Capitalism begins with a critique of the impacts of capitalism on human society and the environment It looks in new ways at what capitalism is and at how it is reproduced That investigation opens the door to fresh ways of looking at how to challenge it Cynthia Kaufman looks at some fundamental questions about how capitalism comes to look like a system that is unbeatable and how people come to have desires that work to reinforce capitalism Kaufman uses this analysis to develop ideas about how to challenge capitalism She argues that rather than looking for the fulcrum point in a system that will make it able to be overthrown we should try to understand what kinds of practices open more spaces for stopping the reproduction of capitalist processes and what kinds of structures need to be developed to make capitalism a less important part of our world Getting Past Capitalism includes a critique of capitalism and presentation of alternatives to capitalism many of which already exist It explores strategies for developing and strengthening those alternatives Capitalism on Trial Jeannette Wicks-Lim,Robert Pollin,2013-01-01 This volume presents a collection of essays honoring Professor Thomas E Weisskopf one of the most prominent contributors to the field of radical economics Beginning his academic career at Harvard before moving to the University of Michigan at Ann Arbor Professor Weisskopf has spent the past forty years exploring through highly innovative and rigorous research the questions of

Whatever Happened to the Leisure Society? A. J. Veal, 2018-10-10 The idea of a leisure society was in its heyday in the 1960s and 1970s when it was predicted that the pattern of falling working hours which had been experienced in Western societies in the first half of the twentieth century would continue indefinitely The leisure society has clearly not been realised On the contrary contemporary industrial societies seem to be characterised by a shortage of time experienced as time squeeze and stress The leisure society idea can be seen as the modern version of the age old dream of a life of ease and plenty This analytically and empirically rich book traces the idea in history through biblical classical Greek medieval and nineteenth century utopian writings and into twentieth century concerns with dystopia and the impact of rapid technological change The leisure society concept turns out to have been an elusive and short lived phenomenon For a variety of reasons the trend towards shorter working hours ran out of steam in the last quarter of the twentieth century However while leisure scholars have deserted the topic a diverse range of activists including environmentalists economists and feminists continue to make the case for reducing working hours Whatever Happened to the Leisure Society concludes that the on going struggle for time should be supported for the sake of human health and well being and for the sake of the planet This is a valuable resource for students and academics in the fields of leisure studies cultural studies history economics sociology and political science
