**The Mathematics of Leon Ehrenpreis** Eric Grinberg, 2000 This book presents the proceedings from the conference honoring the work of Leon Ehrenpreis Professor Ehrenpreis worked in many different areas of mathematics and found connections among all of them For example one can find his analytic ideas in the context of number theory geometric thinking within analysis transcendental number theory applied to partial differential equations and more The conference brought together the communities of mathematicians working in the areas of interest to Professor Ehrenpreis and allowed them to share the research inspired by his work The collection of articles here presents current research on PDEs several complex variables analytic number theory integral geometry and tomography The work of Professor Ehrenpreis has contributed to basic definitions in these areas and has motivated a wealth of research results This volume offers a survey of the fundamental principles that unified the conference and influenced the mathematics of Leon Ehrenpreis

Categorification in Geometry, Topology, and Physics Anna Beliakova, Aaron D. Lauda, 2017-02-21 The emergent mathematical philosophy of categorification is reshaping our view of modern mathematics by uncovering a hidden layer of structure in mathematics revealing richer and more robust structures capable of describing more complex phenomena Categorification is a powerful tool for relating various branches of mathematics and exploiting the commonalities between fields It provides a language emphasizing essential features and allowing precise relationships between vastly different fields This volume focuses on the role categorification plays in geometry topology and physics These articles illustrate many important trends for the field including geometric representation theory homotopical methods in link homology interactions between higher representation theory and gauge theory and double affine Hecke algebra approaches to link homology The companion volume Contemporary Mathematics Volume 683 is devoted to categorification and higher representation theory

Representation Theory and Algebraic Geometry Vladimir Baranovsky, Nicolas Guay, Travis Schedler, 2022-06-15 The chapters in this volume explore the influence of the Russian school on the development of algebraic geometry and representation theory particularly the pioneering work of two of its illustrious members Alexander Beilinson and Victor Ginzburg in celebration of their 60th birthdays Based on the work of speakers and invited participants at the conference Interactions Between Representation Theory and Algebraic Geometry held at the University of Chicago August 21-25 2017 this volume illustrates the impact of their research and how it has shaped the development of various branches of mathematics through the use of D modules the affine Grassmannian symplectic algebraic geometry and other topics All authors have been deeply influenced by their ideas and present here cutting edge developments on modern topics Chapters are organized around three distinct themes Groups algebras categories and representation theory D modules and perverse

sheaves Analogous varieties defined by quivers Representation Theory and Algebraic Geometry will be an ideal resource for researchers who work in the area particularly those interested in exploring the impact of the Russian school Algebraic and Geometric Methods in Mathematical Physics Anne Boutet de Monvel, V.A. Marchenko, 2013-11-11 Proceedings of the Kaciveli Summer School Crimea Ukraine 1993 **Representation Theory and Complex Analysis** Michael

Cowling, 2008-02-27 Six leading experts lecture on a wide spectrum of recent results on the subject of the title They present a survey of various interactions between representation theory and harmonic analysis on semisimple groups and symmetric spaces and recall the concept of amenability They further illustrate how representation theory is related to quantum computing and much more Taken together this volume provides both a solid reference and deep insights on current research activity Weil Conjectures, Perverse Sheaves and l-adic Fourier Transform Reinhardt Kiehl, Rainer Weissauer, 2013-03-14

In this book the authors describe the important generalization of the original Weil conjectures as given by P Deligne in his fundamental paper La conjecture de Weil II The authors follow the important and beautiful methods of Laumon and Brylinski which lead to a simplification of Deligne's theory Deligne's work is closely related to the sheaf theoretic theory of perverse sheaves In this framework Deligne's results on global weights and his notion of purity of complexes obtain a satisfactory and final form Therefore the authors include the complete theory of middle perverse sheaves In this part the l-adic Fourier transform is introduced as a technique providing natural and simple proofs To round things off there are three chapters with significant applications of these theories Lie Algebras, Lie Superalgebras, Vertex Algebras and Related Topics Kailash C.

mathematical physics      *Geometry and Physics: Volume 2* Jørgen Ellegaard Andersen, Andrew Dancer, Oscar García-Prada, 2018-10-18 Nigel Hitchin is one of the world's foremost figures in the fields of differential and algebraic geometry and their relations with mathematical physics and he has been Savilian Professor of Geometry at Oxford since 1997. *Geometry and Physics: A Festschrift in honour of Nigel Hitchin* contains the proceedings of the conferences held in September 2016 in Aarhus, Oxford and Madrid to mark Nigel Hitchin's 70th birthday and to honour his far-reaching contributions to geometry and mathematical physics. These texts contain 29 articles by contributors to the conference and other distinguished mathematicians working in related areas including three Fields Medallists. The articles cover a broad range of topics in differential, algebraic and symplectic geometry and also in mathematical physics. These volumes will be of interest to researchers and graduate students in geometry and mathematical physics.

*Geometric Aspects of Functional Analysis* Vitali D. Milman, Gideon Schechtman, 2007-04-27 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis during the years 2004-2005 reflects the general trends of the theory and are a source of inspiration for research. Most of the papers deal with different aspects of the Asymptotic Geometric Analysis ranging from classical topics in the geometry of convex bodies to the study of sections or projections of convex bodies.

Group Actions and Equivariant Cohomology Loring W. Tu, 2024-11-26 This volume contains the proceedings of the virtual AMS Special Session on Equivariant Cohomology held March 19-20, 2022. Equivariant topology is the algebraic topology of spaces with symmetries. At the meeting, equivariant cohomology was broadly interpreted to include related topics in equivariant topology and geometry such as Bredon cohomology, equivariant cobordism, GKM, Goresky-Kottwitz-MacPherson theory, equivariant K-theory, symplectic geometry and equivariant Schubert calculus. This volume offers a view of the exciting progress made in these fields in the last twenty years. Several of the articles are surveys suitable for a general audience of topologists and geometers. To be broadly accessible, all the authors were instructed to make their presentations somewhat expository. This collection should be of interest and useful to graduate students and researchers alike.

**Towards the Mathematics of Quantum Field Theory** Frédéric Paugam, 2014-02-20 This ambitious and original book sets out to introduce to mathematicians, even including graduate students, the mathematical methods of theoretical and experimental quantum field theory with an emphasis on coordinate-free presentations of the mathematical objects in use. This in turn promotes the interaction between mathematicians and physicists by supplying a common and flexible language for the good of both communities, though mathematicians are the primary target. This reference work provides a coherent and complete mathematical toolbox for classical and quantum field theory based on categorical and homotopical methods, representing an original contribution to the literature. The first part of the book introduces the mathematical methods needed to work with the physicists' spaces of fields, including parameterized and functional differential geometry, functorial analysis and the homotopical geometric theory of non-linear partial differential equations with applications to general gauge theories. The

second part presents a large family of examples of classical field theories both from experimental and theoretical physics while the third part provides an introduction to quantum field theory presents various renormalization methods and discusses the quantization of factorization algebras

Singular Intersection Homology Greg Friedman, 2020-09-24 Intersection homology is a version of homology theory that extends Poincaré duality and its applications to stratified spaces such as singular varieties This is the first comprehensive expository book length introduction to intersection homology from the viewpoint of singular and piecewise linear chains Recent breakthroughs have made this approach viable by providing intersection homology and cohomology versions of all the standard tools in the homology tool box making the subject readily accessible to graduate students and researchers in topology as well as researchers from other fields This text includes both new research material and new proofs of previously known results in intersection homology as well as treatments of many classical topics in algebraic and manifold topology Written in a detailed but expository style this book is suitable as an introduction to intersection homology or as a thorough reference

*Symplectic Geometry* Helmut Hofer, Alberto Abbondandolo, Urs Frauenfelder, Felix Schlenk, 2022-12-05 Over the course of his distinguished career Claude Viterbo has made a number of groundbreaking contributions in the development of symplectic geometry topology and Hamiltonian dynamics The chapters in this volume compiled on the occasion of his 60th birthday are written by distinguished mathematicians and pay tribute to his many significant and lasting achievements

Geometric Analysis and Lie Theory in Mathematics and Physics Alan L. Carey, Michael K. Murray, 1998 Graduate lectures on the interface between mathematics and physics

**Equivariant Poincaré Duality on G-Manifolds** Alberto Arabia, 2021-06-12 This book carefully presents a unified treatment of equivariant Poincaré duality in a wide variety of contexts illuminating an area of mathematics that is often glossed over elsewhere The approach used here allows the parallel treatment of both equivariant and nonequivariant cases It also makes it possible to replace the usual field of coefficients for cohomology the field of real numbers with any field of arbitrary characteristic and hence change equivariant de Rham cohomology to the usual singular equivariant cohomology The book will be of interest to graduate students and researchers wanting to learn about the equivariant extension of tools familiar from non equivariant differential geometry

**Triangulated Categories** Thorsten Holm, Peter Jørgensen, Raphaël Rouquier, 2010-06-24 Over the last few decades triangulated categories have become increasingly important to the extent that they can now be viewed as a unifying theory underlying major parts of modern mathematics This 2010 collection of survey articles written by leading experts covers fundamental aspects of triangulated categories as well as applications in algebraic geometry representation theory commutative algebra microlocal analysis and algebraic topology These self contained articles are a useful introduction for graduate students entering the field and a valuable reference for experts

Singularities of integrals Frédéric Pham, 2011-04-22 Bringing together two fundamental texts from Frédéric Pham's research on singular integrals the first part of this book focuses on topological and geometrical aspects while the second

explains the analytic approach Using notions developed by J Leray in the calculus of residues in several variables and R Thom's isotopy theorems Frédéric Pham's foundational study of the singularities of integrals lies at the interface between analysis and algebraic geometry culminating in the Picard Lefschetz formulae These mathematical structures enriched by the work of Nilsson are then approached using methods from the theory of differential equations and generalized from the point of view of hyperfunction theory and microlocal analysis Providing a must have introduction to the singularities of integrals a number of supplementary references also offer a convenient guide to the subjects covered This book will appeal to both mathematicians and physicists with an interest in the area of singularities of integrals Frédéric Pham now retired was Professor at the University of Nice He has published several educational and research texts His recent work concerns semi classical analysis and resurgent functions
