Aromatherapy: Scent and Psyche Peter Damian,Kate Damian,1995-09 With a thorough exposition of the ancient practice of aromatics in China India Persia and Egypt and a modern scientific understanding of scent this book provides a guide for mastering the use of essential oils *Home* ,1990 *Beyond audiovisual: novel multisensory stimulation techniques and their applications* Justyna Świdrak,Grzegorz Pochwatko,Orestis Georgiou,Sofia Seinfeld,Marta Matamala-Gomez,2024-10-03 Immersive virtual reality technology has been developing extremely dynamically in the last

decade One of the reasons is the impressive progress in 3D graphics and the increasing accessibility of hardware with sufficient computational power to smoothly render high quality 3D environments Virtual reality overwhelms the user by replacing the physical world with a computer generated 3D scenario Its power lies in embodied complex and vivid scenarios rich in context and dynamic engagement of the sensorimotor system which provokes more naturalistic behavioural and physiological responses than abstract stimuli Congruent multisensory stimulation builds virtual experience and makes us forget about the real world Strong presence and embodiment illusions can cause deep cognitive affective and behavioural changes leading to enhanced learning perspective taking and treatments Some types of sensory input have received much more attention than others This includes mainly visual and auditory cues but also to some extent nociception and touch However the human sensory system is much richer and more complex and includes many other senses such as smell and taste but also thermoception interoception equilibrioception and others Most VR experiences are built on rich audiovisual cues since these two modalities allow us to perceive the virtual world and interact with it For example touch although extremely important is often represented in a reductionist form and other modalities such as the sense of smell or thermoception are completely ignored
