Micro- and Nanotechnology in Vaccine Development Mariusz Skwarczynski, Istvan Toth, 2016-09-20 This book provides a comprehensive overview of how use of micro and nanotechnology MNT has allowed major new advance in vaccine development research and the challenges that immunologists face in making further progress MNT allows the creation of particles that exploit the inherent ability of the human immune system to recognize small particles such as viruses and toxins In combination with minimal protective epitope design this permits the creation of immunogenic particles that stimulate a response against the targeted pathogen The finely tuned response of the human immune system to small particles makes it unsurprising that many of the lead adjuvants and vaccine delivery systems currently under investigation are based on nanoparticles Provides a comprehensive and unparalleled overview of the role of micro and nanotechnology in vaccine development Allows researchers to quickly familiarize themselves with the broad spectrum of vaccines and how micro and nanotechnologies are applied to their development Includes a combination of overview chapters setting out general principles and focused content dealing with specific vaccines making it useful to readers from a variety of disciplines

Torchilin,2006 Written by key experts in the field of nanomedicine this book provides a broad introduction to the important field of nanomedicine and application of nanotechnology for drug delivery It covers up to date information regarding various nanoparticulate drug delivery systems describes the various opportunities for the application of nanoparticulate drug carriers in different areas of clinical medicine and analyzes already available information on their clinical applications This book can be used as an advanced textbook by graduate students and young scientists and clinicians at the early stages of their career It is also suitable for non experts from related areas of chemistry biochemistry molecular biology biomedical engineering physiology experimental and clinical medicine and pharmaceutical sciences who are interested in general problems of drug delivery and drug targeting as well as in more specialized topics of using nanoparticulate mediated drug delivery approaches in the individual areas of clinical medicine Prof Torchilin is an expert in Nanomedicine and a recipient of numerous awards including the Lenin Prize in Science Technology of the former USSR membership in the European Academy of Sciences and AAPS Research Achievement Award in Pharmaceutics and Drug Delivery He served as an Associate Professor of Radiology at Harvard Medical School before joining Northeastern University as the Chairman of the Department of Pharmaceutical Sciences **Targeting of Drugs** Gregory Gregoriadis,Brenda McCormack,2000 Subject index c Book News Inc *Chicken Egg Yolk Antibodies, Production and Application* Rüdiger Schade,Ingrid Behn,Michael Erhard,Andreas Hlinak,Christian Staak,2014-11-14 Polyclonal antibodies widely used in research and diagnostics are conventionally isolated from the blood of immunised mammals The fact that antibodies can also be detected in the yolk of eggs laid by immunised hens led to the

development of the yolk antibody technology as an alternative method less stressful to animals Hens can be kept under nearly natural conditions and antibodies be isolated from the eggs Further the IgY technology has the advantage that avian antibodies can be produced against several antigens which do not induce a immune response in mammals Protocols on how to keep and immunise hens and on the extraction isolation and use of antibodies from yolk are described in detail in this manual For their work on yolk antibodies the authors received the FISEA International Foundation for the Substitution of Animal Experimentation Luxembourg prize in 1997

Angiogenesis Michael E. Maragoudakis, Pietro M. Gullino, Peter I. Lelkes, 2013-06-29 Angiogenesis is a multistep process which involves activation proliferation and directed migration of endothelial cells to form new capillaries from existing vessels Under physiological conditions in the adult organisms angiogenesis is extremely slow yet it can be activated for a limited time only in situations such as ovulation or wound healing In a number of disease states however there is a derangement of angiogenesis which can contribute to the pathology of these conditions Hence understanding the molecular biology of endothelial cell activation and differentiation and the mechanisms involved in the regulation of angiogenesis could explain the derangement in disease states and also provide the basis for developing promoters or suppressors of angiogenesis for clinical applications This book contains the proceedings of the NATO Advanced Study Institute on Angiogenesis Molecular Biology Oinical Aspects held in Rhodes Greece from June 16 27 1993 This meeting was a comprehensive review of the various aspects of angiogenesis such as embryonic development endothelial cell heterogeneity and tissue specificity molecular biology of endothelial cell mechanisms for the regulation of angiogenesis disease states in which angiogenesis is involved and potential application of promoters or suppressors of angiogenesis The presentations and discussions of the meeting provided an opportunity for investigators from many different areas of basic science and medicine to exchange information evaluate the present status and provide future research directions in the field of angiogenesis

Radiolabeled Blood Elements J. Martin-Comin, M.L. Thakur, C. Piera, M. Roca, F. Lomena, 2012-12-06 Scintigraphic imaging with radiolabeled blood elements has continued to be a useful diagnostic modality The major trust of recent investigation has been in simplifying labeling techniques and developing new agents that will label blood elements selectively in vitro The VI Symposium of the International Society of Radiolabeled Blood Elements was held in Barcelona Spain during November 23 to 27 1992 The conference was sponsored by the NATO Scientific Affairs Division the USA Department of Energy and the Spanish National Health Service This monograph comprises articles that represent most of the 85 papers 70 oral and 15 posters presented during the symposium The meeting was attended by 110 investigators hailed from 21 countries Although ¹¹¹In oxine and ^{99m}Tc HMPAO remain the choice agents for labeling blood components for routine applications there was heavy emphasis on developing new labeling agents that will either simplify the in vitro labeling procedure or even better will label blood components selectively in vivo by injecting the radioactive agents directly into patients The degree of success in imaging target lesions in humans by using these agents has been excellent *Lyme*

Borreliosis John S. Axford, David H.E. Rees, 2012-12-06 Lyme Borreliosis is a worldwide infectious disease causing a multisystem illness with considerable morbidity particularly in North America and Europe The causative agent is the spirochaete *Borrelia burgdorferi* which is usually transmitted by the ixodid tick from animal reservoirs This book is formed by contributions from the Second European Symposium on Lyme Borreliosis held at St George s Hospital Medical School London in 1993 which reviewed the current state of knowledge of the condition with regard to clinical manifestations diagnosis treatment ecology epidemiology biology and immunopathogenesis In this book important data is reviewed concerning the clinical manifestations of Lyme Borreliosis It seems that strain variation of the spirochaete is the main cause of regional differences seen in the clinical presentation of patients One striking example of this is the relatively high incidence of Lyme arthritis in the USA and apparent rarity of this manifestation in some areas of Europe These important studies open the way for exciting new research that focuses on the immunological and molecular mechanisms that result in disease A full insight into the ecology of *Borrelia burgdorferi* is essential to a balanced understanding of the disease and a number of excellent reviews on this subject are included Significant advances with regard to the biology of *Borrelia burgdorferi* and the immunopathogenic mechanisms that result in disease have been made enabling the role of the Band T lymphocytes in disease to be established and the development of sophisticated phenotyping methods improved diagnostic tests and effective vaccines

New-generation vaccines and novel vaccinal strategies against infectious diseases of livestock, wild and companion animals Denis Archambault, Raul Manzano Roman, Suresh Kumar Tikoo, Christophe Chevalier, Brad Pickering, 2023-08-25 Emerging and re emerging infections in particular those caused by viruses are expected to rise in correlation among other factors with climate changes Antibiotic resistance is another issue that will limit the therapeutic arsenal against bacterial and parasitic infections Therefore one must be adequately prepared to overcome and prevent current and novel infections and vaccination remains the optimal way to fight infectious diseases in humans This is also true for many impacting diseases of livestock and companion animals to which there are no available vaccines First attenuated and inactivated and second subunit generation vaccines have their limitations To overcome this efforts have been made in recent years to develop novel vaccine types such as virus like particle VLP viral vector and DNA based vaccines in humans and animals The recent success in utilizing RNA technology based vaccines to fight SARS CoV 2 to limit the severity of clinical symptoms and mortality constitutes a promising way to develop such vaccines against animal diseases

Development of novel molecules or materials with adjuvant or immunostimulatory activity to adequately stimulate the innate immune response and therefore the pathogen specific adaptative immune response as well as the identification of suitable antigenic material that would bring broad protection against infectious agent variants are other key issues to be considered in developing safe and innovative immunization strategies

Medical Applications of Liposomes D.D. Lasic, D. Papahadjopoulos, 1998-07-22 The development of liposomes as a drug delivery system has fluctuated since its introduction in

the late 1960 s by A D Bangham While academic research of liposomes as a model membrane system has always flourished as the exponential growth of papers can testify the application of these findings to medically useful products has gone through several crises Following the original optimism in the 70 s and early 80 s a period of severe skepticism ensued at the end of the 80 s and beginning of the 90 s culminating in a moderate but real optimism in the mid 90 s as a result of a successful launch of the first products in the US and Europe In this collection of papers the editors have gathered the most promising ideas approaches applications and commercial developments thereby presenting an up to date compilation of the present status of the field This includes such broad areas as anti cancer chemotherapy immune stimulation and infectious diseases Currently the major areas of progress are in delivery of anti fungal agents by conventional liposomes or lipid based carriers and systemic anticancer therapy using long circulating liposomes The future applications as characterized by the direction of present day research is in specific targeting and delivery of informational molecules such as DNA plasmids genes antisense oligonucleotides or ribozymes Other future developments may be in topical delivery vaccination and in diagnostics Features of this book Contributions from almost all the leading labs in the field Up to date critical reviews bridged by editors introductions Organized into a logical framework

Oncoimmunology Laurence Zitvogel, Guido Kroemer, 2017-12-13 In this book leading experts in cancer immunotherapy join forces to provide a comprehensive guide that sets out the main principles of oncoimmunology and examines the latest advances and their implications for clinical practice focusing in particular on drugs with FDA EMA approvals and breakthrough status The aim is to deliver a landmark educational tool that will serve as the definitive reference for MD and PhD students while also meeting the needs of established researchers and healthcare professionals Immunotherapy based approaches are now inducing long lasting clinical responses across multiple histological types of neoplasia in previously difficult to treat metastatic cancers The future challenges for oncologists are to understand and exploit the cellular and molecular components of complex immune networks to optimize combinatorial regimens to avoid immune related side effects and to plan immunomonitoring studies for biomarker discovery The editors hope that this book will guide future and established health professionals toward the effective application of cancer immunology and immunotherapy and contribute significantly to further progress in the field
