## **Numerical Methods In The Theory Of Neutron Transport:**

**Numerical Methods in the Theory of Neutron Transport** Guriĭ Ivanovich Marchuk, Viacheslav Ivanovich Lebedev, 1986      **Computational Methods in Transport** Frank Graziani, 2006-02-17

There exist a wide range of applications where a significant fraction of the momentum and energy present in a physical problem is carried by the transport of particles. Depending on the specific application the particles involved may be photons, neutrons, neutrinos or charged particles. Regardless of which phenomena is being described, at the heart of each application is the fact that a Boltzmann-like transport equation has to be solved. The complexity and hence expense involved in solving the transport problem can be understood by realizing that the general solution to the 3D Boltzmann transport equation is in fact really seven dimensional: 3 spatial coordinates, 2 angles, 1 time and 1 for speed or energy. Low order approximations to the transport equation are frequently used due in part to physical justification but many in cases simply because a solution to the full transport problem is too computationally expensive. An example is the diffusion equation which effectively drops the two angles in phase space by assuming that a linear representation in angle is adequate. Another approximation is the grey approximation which drops the energy variable by averaging over it. If the grey approximation is applied to the diffusion equation the expense of solving what amounts to the simplest possible description of transport is roughly equal to the cost of implicit computational fluid dynamics. It is clear therefore that for those application areas needing some form of transport, fast, accurate and robust transport algorithms can lead to an increase in overall code performance and a decrease in time to solution.

Numerical Solution of Transient and Steady-state Neutron Transport Problems Bengt G. Carlson, 1959      *Computational Methods of Neutron Transport* Elmer Eugene Lewis, W. F. Miller, 1984      **Deterministic Numerical Methods for Unstructured-Mesh Neutron Transport Calculation** Liangzhi Cao, Hongchun Wu, 2020-08-30. Deterministic Numerical Methods for Unstructured Mesh Neutron Transport Calculation presents the latest deterministic numerical methods for neutron transport equations (NTEs) with complex geometry which are of great demand in recent years due to the rapid development of advanced nuclear reactor concepts and high performance computational technologies. This book covers the well-known methods proposed and used in recent years, not only theoretical modeling but also numerical results. This book provides readers with a very thorough understanding of unstructured neutron transport calculations and enables them to develop their own computational codes. The fundamentals, numerical discretization methods, algorithms and numerical results are discussed. Researchers and engineers from utilities and research institutes are provided with examples on how to model an advanced nuclear reactor which they can then apply to their own research projects and lab settings. Combines the theoretical models with numerical methods and results in one complete resource. Presents the latest progress on the topic in an easy-to-navigate format.      *Mathematical Analysis and Numerical Methods for Science and Technology* Robert Dautray, Jacques-Louis Lions, 1999-11-23. Value Problems for Transport Equations Valeri Agoshkov, 2012-12-06 In the modern theory of boundary value problems the following approach to investigation is agreed upon we call it the functional approach some functional spaces are chosen the statements of boundary value problems are formulated on the basis of these spaces and the solvability of problems and their dependence on the original data of the problems are analyzed These stages are put on the basis of the correct statement of different problems of mathematical physics or of the definition of ill posed problems For example if the solvability of a problem in the functional spaces chosen cannot be established then probably the reason is in their unsatisfactory choice Then the analysis should be repeated employing other functional spaces Elliptical problems can serve as an example of classical problems which are analyzed by this approach Their investigations brought a number of new notions and results in the theory of Sobolev spaces which in turn enabled us to create a sufficiently complete theory of solvability of elliptical equations Nowadays the mathematical theory of radiative transfer problems and kinetic equations is an extensive area of modern mathematical physics It has various applications in astrophysics the theory of nuclear reactors geophysics the theory of chemical processes semiconductor theory fluid mechanics etc 25 29 31 39 40 47 52 78 83 94 98 120 124 125 135 146
