Numerical Structure Factor Tables Martin Julian Buerger, 1941 *Numerical Structure Factor Tables* Martin J. Buerger, 1953 **International Tables for Crystallography, Volume B** Uri Shmueli, 2008-08-27 International Tables for Crystallography are no longer available for purchase from Springer. For further information please contact Wiley Inc follow the link on the right hand side of this page. Volume B presents accounts of the numerous aspects of reciprocal space in crystallographic research. After an introductory chapter Part 1 presents the reader with an account of structure factor formalisms an extensive treatment of the theory algorithms and crystallographic applications of Fourier methods and fundamental as well as advanced treatments of symmetry in reciprocal space. In Part 2 these general accounts are followed by detailed expositions of crystallographic statistics the theory of direct methods Patterson techniques isomorphous replacement and anomalous scattering and treatments of the role of electron microscopy and diffraction in crystal structure determination including applications of direct methods to electron crystallography. Part 3 deals with applications of reciprocal space to molecular geometry and best plane calculations and contains a treatment of the principles of molecular graphics and modelling and their applications. A convergence acceleration method of importance in the computation of approximate lattice sums is presented and the part concludes with a discussion of the Ewald method. Part 4 contains treatments of various diffuse scattering phenomena arising from crystal dynamics disorder and low dimensionality liquid crystals and an exposition of the underlying theories and or experimental evidence. Polymer crystallography and reciprocal space images of aperiodic crystals are also treated. Part 5 of the volume contains introductory treatments of the theory of the interaction of radiation with matter dynamical theory as applied to X ray electron and neutron diffraction techniques. The simplified trigonometric expressions for the structure factors in the 230 three dimensional space groups which appeared in Volume I of International Tables for X ray Crystallography are now given in Appendix 1 4 3 to Chapter 1 4 of this volume. Volume B is a vital addition to the library of scientists engaged in crystal structure determination crystallographic computing crystal physics and other fields of crystallographic research. Graduate students specializing in crystallography will find much material suitable for self study and a rich source of references to the relevant literature. **International Tables for Crystallography, Volume B** U. CO₂-microemulsions with additives Yvonne Pütz, 2015-07-20 Improved building insulation is an important part of today's efforts on energy saving Here nano insulation materials promise especially low thermal conductivity Therefore an easy and cost efficient production of these materials is an aim of present material research One approach towards these materials is the expansion and fixation of polymerisable microemulsions of supercritical blowing agents However the nano sized bubbles are found to undergo undesired coarsening processes In order to reduce the increasing interfacial tension emerging during expansion and therewith the coarsening it was suggested to add low molecular hydrophobic substances to the supercritical microemulsion And indeed the addition of cyclohexane to a microemulsion of the type brine CO₂ fluorinated surfactants was found to reduce the fluorinated surfactant content a measure for the interfacial tension considerably In this work a systematic small angle neutron scattering SANS contrast variation was performed and the data were analysed by model independent Fourier analysis It was found that a concentration gradient of cyclohexane inside the CO₂ cyclohexane microemulsion droplets forms Interestingly the analysis reveals a depletion zone close to the amphiphilic film which presumably develops due to the known repulsive interactions of cyclohexane and the fluorinated surfactant tails Using a specially designed high pressure SANS cell to perform stroboscopic pressure jumps the influence of cyclohexane on pressure induced elongation of microemulsion droplets as well as the early state of foaming after expansion was studied Here the pressure dependent thermodynamic stability of such microemulsions allows for a fast repeatability of the pressure cycles It turned out that cyclohexane systematically slows down the structural changes in all processes Parallel pressure jump experiments with poly N isopropylacrylamide PNIPAM particles revealed that hydration and dehydration kinetics can be studied with the same experimental setup The first kinetic experiments which combine a CO₂ microemulsion mixed with PNIPAM particles indicate that PNIPAM acts as a stabiliser for the microemulsion

and further reduces the thermodynamic driving force of the demixing process **Aperiodic '94 - Proceedings Of The International Conference On Aperiodic Crystals** Gervais Chapuis,W Paciorek,1995-06-30 The conference promotes the theoretical and methodological development of crystallographic investigations of aperiodic crystals including modulated structures polytypes incommensurate misfit or composite crystals and quasi crystals It also promotes scientific interchange among groups working in the various fields of aperiodic materials Special emphasis will be given to multidisciplinary aspects of aperiodicity **The SAGE Handbook of Personality Theory and Assessment** Gregory J Boyle,Gerald
