Lydolph, 1985 To find more information about Rowman and Littlefield titles please visit [www rowmanlittlefield com](http://www.rowmanlittlefield.com) **Fundamentals of Physical Geography** David John Briggs, Peter Smithson, 1986 This primary text designed for undergraduate courses provides a modern approach to the fundamentals of physical geography by linking process form and effect The authors explore the natural world as a series of systems and consider the relationship between the different components of each They examine in turn the atmosphere hydrosphere lithosphere and biosphere providing a thorough discussion of their composition and the ways in which their interaction forms our global environment Throughout the authors demonstrate the role of humanity in influencing the physical environment and the ways in which we are affected by our surroundings Clearly written and lavishly illustrated with maps drawings photographs and charts *Fundamentals of Physical Geography* is an ideal text *A Handbook of medical climatology* Samuel Edwin Solly, 1897 *Biogeography* James Allan Taylor, 1984-01-01 Biogeography has been one of the great growth areas in geography in recent years with much new research work and many new developments taking place This book presents an authoritative up to date international review of all the major biogeographical themes The chapters define each theme and its place within biogeography and consider the methods of study adopted Each chapter then assesses recent trends and the latest state of the art and concludes by examining where future developments are likely Many case studies and examples are provided from throughout the world including North America *Proceedings of the Conference on Metropolitan Physical Environment*, 1977 A report on the conference held in August 1975 at Syracuse NY containing 50 papers presented at the meeting at which some 160 scientists and scholars discussed the use of vegetation space and structures to improve the amenities for people who live in metropolitan areas **Unifying Geography** David T. Herbert, John A. Matthews, 2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus Unifying Geography focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter

concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline Unifying Geography will give the discipline renewed strength and direction thus improving its status both within and outside geography *Themes in Biogeography* J. A. Taylor, 2019-10-01 Originally published in 1984 *Themes in Biogeography* presents a broad examination of biogeographical themes extending across the field of plant and animal ecology and geography The book provides a detailed and unique investigation into life and its environment and delves into not just geography and ecology but provides an interdisciplinary look at these areas across both biological and environmental sciences The book examines biogeographical themes applying them to areas of research in soils and climate change as well as in depth studies of plant communities and their animal associates The book also discusses plants and animals through their taxonomic distribution and deals with factors of plant geography using both global and regional examples This book will be of interest to biologists ecologists and geographers alike **Environmental Systems** I.
