Hine, R.C. Carson, G.L. Maddox, R.J. Jr. Thompson, R.B. Williams, 2012-12-06 This book is the product of many years experience teaching behavioral science in a way that demonstrates its relevance to clinical medicine We have been guided by the reactions and evaluations of many first year medical students The result is a conceptual framework different from those that we and others had tried before Because the clinical relevance of knowledge about human behavior is less apparent to many first year students than that of the other traditional pre clinical courses books and courses organized as brief introductions to psychology sociology and behavioral neurology have often been poorly received Various medical schools and texts have explored ways to overcome this difficulty One text organizes the presentation around very practical problems which are of unmistakable interest to the future physician the therapeutic relationship death and dying sexuality and pain to give a few examples Another emphasizes stages of development periods of the human life cycle as its organizing principle Both of these approaches have merit and have been used successfully in various schools They seem to us however to have a potentially serious shortcoming They focus student attention too much on the more immediately intriguing issues of specific clinical problems or on the more easily recognized age specific behavioral issues In the limited time available the teaching of general principles of human behavioral functioning may then be neglected      Positive Behavior Support for People with Developmental Disabilities Edward G. Carr, 1999 This book prepared in response to a request from the United States Department of Education Office of Special Education Programs reviews the published literature on positive behavior interventions and uses this database to provide four main content areas for research Positive behavior support PBS is defined as an approach for dealing with problem behavior that focuses on the remediation of deficient contexts such as environmental conditions and or behavioral repertoires that by functional assessment are documented to be the source of the problem The research published on PBS between 1985 and 1996 n 107 articles was reviewed with respect to four categories of variables demographics assessment practices intervention strategies and outcomes Results indicated that 1 PBS is widely applicable to people with serious problem behavior 2 the field is growing rapidly overall but especially in the use of

assessment and in interventions that focus on correcting environmental deficiencies 3 using stringent criteria of success PBS is effective in reducing problem behavior in one half to two thirds of cases 4 success rates nearly double when intervention is based on a prior functional assessment and 5 consumer needs that emphasize comprehensive lifestyle support long term change practicality and relevance and direct support for consumers themselves are inadequately addressed by the research base Recommendations are made for bridging the research to practice gap Contains more than 300 references Author CR
