High Value Fermentation Products, Volume 1 Saurabh Saran, Vikash Babu, Asha Chaubey, 2019-03-12 Green technologies are no longer the future of science but the present With more and more mature industries such as the process industries making large strides seemingly every single day and more consumers demanding products created from green technologies it is essential for any business in any industry to be familiar with the latest processes and technologies It is all part of a global effort to go greener and this is nowhere more apparent than in fermentation technology This book describes relevant aspects of industrial scale fermentation an expanding area of activity which already generates commercial values of over one third of a trillion US dollars annually and which will most likely radically change the way we produce chemicals in the long term future From biofuels and bulk amino acids to monoclonal antibodies and stem cells they all rely on mass suspension cultivation of cells in stirred bioreactors which is the most widely used and versatile way to produce Today a wide array of cells can be cultivated in this way and for most of them genetic engineering tools are also available Examples of products operating procedures engineering and design aspects economic drivers and cost and regulatory issues are addressed In addition there will be a discussion of how we got to where we are today and of the real world in industrial fermentation This chapter is exclusively dedicated to large scale production used in industrial settings

Bioprocessing Owen P. Ward, 2012-12-06 Methods for processing of biological materials into useful products represent essential core manufacturing activities of the food chemical and pharmaceutical industries On the one hand the techniques involved include well established process engineering methodologies such as mixing heat transfer size modification and a variety of separation and fermentation procedures In addition new bioprocessing practices arising from the exciting recent advances in biotechnology including innovative fermentation cell culture and enzyme based operations are rapidly extending the frontiers of

bioprocessing These developments are resulting in the introduction to the marketplace of an awesome range of novel biological products having unique applications Indeed the United States Office of Technology Assessment has concluded that competitive advantage in areas related to biotechnology may depend as much on developments in bioprocess engineering as on innovations in genetics immunology and other areas of basic science Advances in analytical instrumentation computerization and process automation are playing an important role in process control and optimization and in the maintenance of product quality and consistency characteristics Bioprocessing represents the industrial practice of biotechnology and is multidisciplinary in nature integrating the biological chemical and engineering sciences This book discusses the individual unit operations involved and describes a wide variety of important industrial bioprocesses I am very grateful to Sanjay Thakur who assisted me in the collection of material for this book

Regulating Genetically Modified Crops in View of Environmental Risks Ancui Liu, 2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China's GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities
