Principles of Data Mining Max Bramer, 2016-11-09 This book explains and explores the principal techniques of Data Mining the automatic extraction of implicit and potentially useful information from data which is increasingly used in commercial scientific and other application areas It focuses on classification association rule mining and clustering Each topic is clearly explained with a focus on algorithms not mathematical formalism and is illustrated by detailed worked examples The book is written for readers without a strong background in mathematics or statistics and any formulae used are explained in detail It can be used as a textbook to support courses at undergraduate or postgraduate levels in a wide range of subjects including Computer Science Business Studies Marketing Artificial Intelligence Bioinformatics and Forensic Science As an aid to self study this book aims to help general readers develop the necessary understanding of what is inside the black box so they can use commercial data mining packages discriminately as well as enabling advanced readers or academic researchers to understand or contribute to future technical advances in the field Each chapter has practical exercises to enable readers to check their progress A full glossary of technical terms used is included This expanded third edition includes detailed descriptions of algorithms for classifying streaming data both stationary data where the underlying model is fixed and data that is time dependent where the underlying model changes from time to time a phenomenon known as concept drift

Principles of Data Mining and Knowledge Discovery , **Scientific Data Mining and Knowledge Discovery** Mohamed Medhat Gaber, 2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1 Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scientific data The use of computational

power for data analysis and knowledge discovery in scientific disciplines has found its roots with the revolution of high performance computing systems Computational science in physics chemistry and biology represents the first step towards automation of data analysis tasks The rationale behind the development of computational science in different areas was automating mathematical operations performed in those areas There was no attention paid to the scientific discovery process Automated Scientific Discovery ASD 1.3 represents the second natural step ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences Although early research articles have shown great successes the area has not evolved due to many reasons The most important reason was the lack of interaction between scientists and the automating systems
