Genetika dan Pemuliaan Gatot Ciptadi,Aulanni'am,Agus Budiarto,Yudit Oktanella,2019-12-31 Buku ini fokus pada beberapa aspek dasar dan analisis mendalam tentang materi genetik kromosom DNA dan gen karakter kualitatif dan kuantitatif genetika populasi seleksi dan sistem perkawinan Fokus bahasan lebih substansi keilmuan pada permasalahan dan implementasinya dikaitkan dengan penemuan penemuan hasil penelitian topik topik terbaru yang sangat cepat perkembangannya khususnya pada lingkungan tropis ternak hewan lokal Indonesia **A New Foundation for Representation in Cognitive and Brain Science** Jaime Gómez-Ramirez,2013-11-22 The purpose of the book is to advance in the understanding of brain function by defining a general framework for representation based on category theory The idea is to bring this mathematical formalism into the domain of neural representation of physical spaces setting the basis for a theory of mental representation able to relate empirical findings uniting them into a sound theoretical corpus The innovative approach presented in the book provides a horizon of interdisciplinary collaboration that aims to set up a common agenda that synthesizes mathematical formalization and empirical procedures in a systemic way Category theory has been successfully applied to qualitative analysis mainly in theoretical computer science to deal with programming language semantics Nevertheless the potential of category theoretic tools for quantitative analysis of networks has not been tackled so far Statistical methods to investigate graph structure typically rely on network parameters Category theory can be seen as an abstraction of graph theory Thus new categorical properties can be added into network analysis and graph theoretic constructs can be accordingly extended in more fundamental basis By generalizing networks using category theory we can

address questions and elaborate answers in a more fundamental way without waiving graph theoretic tools The vital issue is to establish a new framework for quantitative analysis of networks using the theory of categories in which computational neuroscientists and network theorists may tackle in more efficient ways the dynamics of brain cognitive networks The intended audience of the book is researchers who wish to explore the validity of mathematical principles in the understanding of cognitive systems All the actors in cognitive science philosophers engineers neurobiologists cognitive psychologists computer scientists etc are akin to discover along its pages new unforeseen connections through the development of concepts and formal theories described in the book Practitioners of both pure and applied mathematics e g network theorists will be delighted with the mapping of abstract mathematical concepts in the terra incognita of cognition
