which separated the ninth and tenth editions. Although the pages after the first two hundred differ slightly in the present edition they are not so much altered as to render it difficult to refer to them. I subjoin a list of the most important points on which I have introduced new information in the present edition. **Principles of Geology, Vol. 1 of 4** Charles Lyell, 2015-06-15. Excerpt from Principles of Geology Vol 1 of 4. Being an Inquiry How Far the Former Changes on the Earth's Surface Are Referable to Causes Now in Operation. In the Preface to the former edition of the Principles of Geology I gave a brief account of the progress of the work up to the publication of the Third Volume in 1833. This account I shall now repeat with some omissions and with the addition of such information as I think will be useful to the reader respecting the latest alterations made in the work. The original MS of the Principles of Geology was delivered to the publisher at the close of the year 1827 when it was proposed that it should appear in the course of the year following in two volumes octavo. Many causes concurred to delay the completion of the work and considerably to modify the original plan. In May 1828 when the preliminary chapters on the History of Geology and some others which follow them in the first volume were nearly finished I became anxious to visit several parts of the continent in order to acquire more information concerning the tertiary formations. An examination of how modern art was impacted by the concept of prehistory and the prehistoric. Prehistory is an invention of the late nineteenth century. In that moment of technological progress and acceleration of production and circulation three major Western narratives about time took shape. One after another these new fields of inquiry delved into the obscure immensity of the past: first to surmise the age of the Earth, second to find the point of emergence of human beings, and third to ponder the age of art. Maria Stavrinaki considers the inseparability of these accounts of temporality from the disruptive forces of modernity. She asks what a history of modernity and its art would look like if considered through these three interwoven inventions of the longue durée. Transfixed by Prehistory attempts to

articulate such a history which turns out to be more complex than an inevitable march of progress leading up to the Anthropocene Rather it is a history of stupor defamiliarization regressive acceleration and incessant invention since the new was also found in the deep sediments of the Earth Composed of as much speed as slowness as much change as deep time as much confidence as skepticism and doubt modernity is a complex phenomenon that needs to be rethought Stavrinaki focuses on this intrinsic tension through major artistic practices C zanne Matisse De Chirico Ernst Picasso Dubuffet Smithson Morris and contemporary artists such as Pierre Huyghe and Thomas Hirschhorn philosophical discourses Bataille Blumenberg and J nger and the human sciences This groundbreaking book will attract readers interested in the intersections of art history anthropology psychoanalysis mythology geology and archaeology **The Coming of Evolution** John Wesley Judd,1910
