Breitenstein, Wilhelm Warta, Martin Langenkamp, 2010-09-05 In the last 7 years the 1st edition of Lock in Thermography has established as a reference book for all users of this technique for investigating electronic devices especially solar cells At this time a vital further development of lock in thermography could be observed Not only the experimental technique was improved by applying new and better infrared cameras solid immersion lenses and novel timing strategies but also completely new applications of lock in thermography were established by implying irradiation of light during the measurements The two groups of new techniques are different kinds of Illuminated Lock In Thermography ILIT and Carrier Density Imaging resp Infrared Lifetime Imaging CDI ILM While ILIT is performed on solar cells CDI ILM is performed on bare wafers for imaging the local minority carrier lifetime and the local concentration of trapping centers The new edition of this book implements these new developments One new section entitled Timing strategies is added In this new ways are introduced to overcome previous limitations of the choice of the lock in frequency in comparison with the frame rate of the camera The previous diffraction limit of the spatial resolution can be overcome by a factor of up to 4 by applying so called solid immersion lenses This technique is introduced and its application for failure analysis of ICs where highest possible spatial resolution is desired is shown in another new section **Near-Infrared Organic Materials and Emerging Applications** Zhi Yuan

Wang, 2013-05-08 To physicists and chemists color means light emission absorption spectrum and coloration Near Infrared Organic Materials and Emerging Applications presents knowledge and applications of invisible colored organic materials Near infrared NIR materials are defined as substances that interact with NIR light namely absorption and reflection

**America's Space Sentinels** Jeffrey T. Richelson, 2012-11-20 Originally published in 1999 America's Space Sentinels won the American Astronautical Society's prestigious Eugene Emme Astronautical Literature Award and quickly established itself as the definitive book for understanding a crucial component of our national defense capabilities It focused on the emergence and evolution of the Air Force's Defense Support Program DSP satellite system which came on line in 1970 and continued to perform at a high level through the turn of this century and beyond For this new edition Jeffrey Richelson covers significant developments during the last dozen years relating to the deployment of these satellites especially the struggles to develop and launch the follow on Space Based Infrared System SBIRS beginning in the late 1990s and continuing up to the present The result is a book that remains the first and best source of information regarding these vital programs As Richelson notes SBIRS like its aging but still functioning predecessor has been designed primarily to provide instant early warning of missile launches from around the globe particularly China Russia North Korea Pakistan India and Iran through the infra red sensors carried on each satellite But the new system beset by hardware software fiscal and political problems has only managed to move forward in fits and starts While it has done so the DSP system has continued to monitor the skies above the earth two key ground stations in Australia and Germany have closed nuclear powers Russia and the United States conferred extensively over the so called Y2K problem concerned that a computer malfunction might produce false alarms of a missile attack and worries over potential launches from nations perceived as hostile to American interests have increased substantially

Reviews, Refinements and New Ideas in Face Recognition

Peter Corcoran, 2011-07-27 As a baby one of our earliest stimuli is that of human faces We rapidly learn to identify characterize and eventually distinguish those who are near and dear to us We accept face recognition later as an everyday ability We realize the complexity of the underlying problem only when we attempt to duplicate this skill in a computer vision system This book is arranged around a number of clustered themes covering different aspects of face recognition The first section on Statistical Face Models and Classifiers presents reviews and refinements of some well known statistical models The next section presents two articles exploring the use of Infrared imaging techniques and is followed by few articles devoted to refinements of classical methods New approaches to improve the robustness of face analysis techniques are followed by two articles dealing with real time challenges in video sequences A final article explores human perceptual issues of face recognition

*Near Infrared Detectors Based on Silicon Supersaturated with Transition Metals* Daniel Montero Álvarez, 2021-01-08 This thesis makes a significant contribution to the development of cheaper Si based Infrared detectors operating at room temperature In particular the work is focused in the integration of the Ti supersaturated Si material into a CMOS Image Sensor route the technology of choice for imaging nowadays due to its low cost and high resolution First the material is fabricated using ion implantation of Ti atoms at high concentrations Afterwards the crystallinity is recovered by means of a pulsed laser process The material is used to fabricate planar photodiodes which are later characterized using current voltage and quantum efficiency measurements The prototypes showed improved sub bandgap responsivity up to 0.45 eV at room temperature The work is further supported by a collaboration with STMicroelectronics where the supersaturated material was integrated into CMOS based sensors at industry level The results show that Ti supersaturated Si is compatible in terms of contamination process

integration and uniformity The devices showed similar performance to non implanted devices in the visible region This fact leaves the door open for further integration of supersaturated materials into CMOS Image Sensors      **Visual Information Processing** ,1996      Introduction to Infrared and Electro-optical Systems Ronald G.
