Principles of Knowledge Representation and Reasoning A. G. Cohn, Fausto Giunchiglia, Bart Selman, 2000

*Principles of Knowledge Representation and Reasoning* A. G. Cohn, Fausto Giunchiglia, Bart Selman, 2000      **Decision Making Process** Denis Bouyssou, Didier Dubois, Henri Prade, Marc Pirlot, 2013-05-10 This book provides an overview of the main methods and results in the formal study of the human decision making process as defined in a relatively wide sense A key aim of the approach contained here is to try to break down barriers between various disciplines encompassed by this field including psychology economics and computer science All these approaches have contributed to progress in this very important and much studied topic in the past but none have proved sufficient so far to define a complete understanding of the highly complex processes and outcomes This book provides the reader with state of the art coverage of the field essentially forming a roadmap to the field of decision analysis The first part of the book is devoted to basic concepts and techniques for representing and solving decision problems ranging from operational research to artificial intelligence Later chapters provide an extensive overview of the decision making process under conditions of risk and uncertainty Finally there are chapters covering various approaches to multi criteria decision making Each chapter is written by experts in the topic concerned and contains an extensive bibliography for further reading and reference      **The Semantic Web - ISWC 2002** Ian Horrocks, James Hendler, 2003-08-01 This book constitutes the refereed proceedings of the First International Semantic Web Conference ISWC 2002 held in Sardinia Italy in June 2002 The 27 revised full research papers 6 position papers and 7 system descriptions presented were carefully reviewed and selected from a total of 133 submissions All current issues in this exciting new field are addressed ranging from theoretical aspects to applications in various fields      **On the Move to Meaningful Internet Systems 2002: CoopIS, DOA, and ODBASE** Zahir Tari, 2003-06-30 This book constitutes the refereed proceedings of the three confederated conferences CoopIS 2002 DOA 2002 and ODBASE 2002 held in Irvine CA USA in October November 2002 The 77 revised full papers and 10 posters presented were carefully reviewed and selected from a total of 291 submissions The papers are organized in topical sections on interoperability workflow mobility agents peer to peer and ubiquitous work process business and transaction infrastructure query processing quality issues agents and middleware cooperative systems ORB enhancements Web services distributed object scalability and heterogeneity dependability and security reflection and reconfiguration real time scheduling component based applications ontology languages conceptual modeling ontology management ontology development and engineering XML and data integration and tools for the intelligent Web      Databases and Information Systems IV Olegas Vasilecas, Johann Eder, Albertas Caplinskis, 2007 Contains papers that present original results in business modeling and enterprise engineering database research data engineering data quality and data analysis IS engineering Web engineering and application of AI methods      *Ontolinguistics* Andrea C. Schalley, Dietmar Zaefferer, 2008-08-22 Current progress in linguistic theorizing is more and

more informed by cross linguistic including cross modal investigation Comparison of languages relies crucially on the concepts that can be coded with similar effort in all languages These concepts are part of every language user s ontology the network of cross connected conceptualizations the mind uses in coping with the world Assuming that language comparability is rooted in the comparability of user ontologies the idea of the present volume is to further instigate progress in linguistics by looking behind the interface with the conceptual intentional system and asking a still underexplored question How are ontological structures reflected in intra and cross linguistic regularities This question defines the research program of ontology based linguistics or ontolinguistics Recent advances in the theory of language have been characterized by an emphasis on external explanatory adequacy and thus on relating language to other phenomena The research program introduced in this volume adds a decisively distinct and fresh aspect to this emerging new contextualization of the field by bringing together insights from different areas mainly linguistics but also neuroscience philosophy and artificial intelligence In providing these disciplines with a new common task the exploration of the impact of ontological structures on linguistic regularities the ontolinguistic approach promises to develop into a vital branch of cognitive science Documenting the beginnings the book aims to instigate future interdisciplinary research in this area It will be of interest to researchers in linguistics artificial intelligence philosophy and cognitive science in general
