Signal and Image Processing for Remote Sensing, Second Edition C.H. Chen, 2012-02-22 Continuing in the footsteps of the pioneering first edition *Signal and Image Processing for Remote Sensing Second Edition* explores the most up to date signal and image processing methods for dealing with remote sensing problems Although most data from satellites are in image form signal processing can contribute significantly in extracting information from remotely sensed waveforms or time series data This book combines both providing a unique balance between the role of signal processing and image processing Featuring contributions from worldwide experts this book continues to emphasize mathematical approaches Not limited to satellite data it also considers signals and images from hydroacoustic seismic microwave and other sensors Chapters cover important topics in signal and image processing and discuss techniques for dealing with remote sensing problems Each chapter offers an introduction to the topic before delving into research results making the book accessible to a broad audience This second edition reflects the considerable advances that have occurred in the field with 23 of 27 chapters being new or entirely rewritten Coverage includes new mathematical developments such as compressive sensing empirical mode decomposition and sparse representation as well as new component analysis methods such as non negative matrix and tensor factorization The book also presents new experimental results on SAR and hyperspectral image processing The emphasis is on mathematical techniques that will far outlast the rapidly changing sensor software and hardware technologies Written for industrial and academic researchers and graduate students alike this book helps readers connect the dots in image and signal processing

New in This Edition The second edition includes four chapters from the first edition plus 23 new or entirely rewritten

chapters and 190 new figures New topics covered include Compressive sensing The mixed pixel problem with hyperspectral images Hyperspectral image HSI target detection and classification based on sparse representation An ISAR technique for refocusing moving targets in SAR images Empirical mode decomposition for signal processing Feature extraction for classification of remote sensing signals and images Active learning methods in classification of remote sensing images Signal subspace identification of hyperspectral data Wavelet based multi hyperspectral image restoration and fusion The second edition is not intended to replace the first edition entirely and readers are encouraged to read both editions of the book for a more complete picture of signal and image processing in remote sensing See Signal and Image Processing for Remote Sensing CRC Press 2006

Heating, Cooling, Lighting Norbert M. Lechner, 2014-09-23 Sustainable environmental control through building design Heating Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design By detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating cooling and lighting This new fourth edition includes new information on integrated design strategies and designing for the Tropics Resources include helpful case studies checklists diagrams and a companion website featuring additional cases an image bank and instructor materials Designing buildings that require less energy to heat cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems Basic design decisions regarding size orientation and form have a great impact on the sustainability cost and comfort of a building Heating Cooling and Lighting provides detailed guidance for each phase of a design project Readers will Understand the concept of sustainability as applied to energy sources Review the basic principles of thermal comfort and the critical role of climate Learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics Discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems In sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself With this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control *Practical Building Construction* John Parnell Allen, 1903

Construction Graphics Keith A. Bisharat, 2025-03-18 Learn how managers of the construction process use construction graphics to analyze evaluate and organize the labor equipment and materials required to fulfill the design professionals instructions regarding a project Construction drawings are in their essence a set of goals the graphic and written instructions provided by architects and engineers to construction professionals that adequately manifest the outcomes sought for a project Construction professionals translate those instructions into discreet processes and sequences of work to which values in both time and money can be attributed Construction Graphics

has long stood as the essential treatment of this subject from the constructor's point of view. Now updated from the second edition, the third edition reflects advances in technology and project delivery systems and offers an analysis of how the ideas discussed throughout the text might be applied in the context of one system in a commercial building. Construction Graphics continues to be an indispensable volume for anyone managing construction work. Readers of the third edition of Construction Graphics will also find enhanced treatment of technology as it operates in construction project delivery and the relationship between design professionals and builders. Exercises at the end of each chapter with detailed answers in a helpful appendix. Illustrations and figures throughout to emphasize key concepts. Judge Antônio A. Cançado Trindade. The Construction of a Humanized International Law Antônio Augusto Cançado Trindade, 2015-01-27 This volume is the sixth in the Series The Judges which collects and synthesizes the opinions of leading international Judges of the contemporary era who have contributed significantly to the progressive development of international law. The current volume contains a selection of the Individual Opinions of Judge Antônio A. Cançado Trindade, former Judge and President of the Inter American Court of Human Rights and since 2008 a Judge of the International Court of Justice. Many dwell on aspects of the increased humanization of international law. Elevating this body of norms which have traditionally focused on purely inter-State relations to a level where individuals and their suffering projected in time become a primary concern is without doubt Antônio A. Cançado Trindade's major doctrinal contribution. Revisiting the traditional conceptions of the basis of State responsibility and of jurisdiction, the problems of amnesty laws, the prohibitions of jus cogens, the imperative of access to justice in the light of jus cogens, the obligations erga omnes of protection, the provisional measures of protection, locus standi in judicio and the international legal personality of the human person, jus standi and the international legal capacity of the human person, and developments in reparations are but a few examples of the themes examined in the learned Opinions expressed by Judge Cançado Trindade at the Inter American Court of Human Rights. The great achievement of Judge Cançado Trindade at the International Court of Justice has been to draw attention to this dimension and to further its development in the international case law in the light of the universal juridical conscience and stressing the relevance of general principles of international law. In a significant number of cases, the World Court acts today as a human rights court, dealing increasingly albeit under the traditional umbrella of inter-State disputes with situations that involve human suffering and lead it to find human rights violations. The volume includes a Preface by Dean Spielmann and a General Introduction by Andrew Drzemczewski. Two volume set. This title comprises volume 1/2. We also offer this title as part of a 3 volume set. isbn 9789004375048 *How to*
