

# PRINCIPLES OF POLAROGRAPHY

Polarography is an electrochemical method of analysis incorporating features of electrolysis. In electrolysis the aim is to remove completely a chosen constituent from the solution by passing an electric current through it for a sufficient length of time. The electrodes have relatively large surfaces and the solution is stirred to facilitate transport of electroactive material to the electrode. The electrolysis in Polarography is of short duration and the electrode on which the constituents are placed out is a dropping mercury electrode or other micro electrode so that the currents are very small.

Woods, 2012-12-06 123 phase and hence have no direct bearing on the retention time of solutes. However, in gas solid chromatography, a considerable quantity of the mobile phase may be adsorbed on the surface of the stationary adsorbent which diminishes the column's effective length and ability to retain solutes. In this respect, helium has been found to be preferable to most other gases (GREENE and Roy 1957) because it is adsorbed to the least extent. 3. Packed columns offer a considerable resistance to flow which may create a pressure differential between inlet and outlet of sufficient magnitude to cause an unfavorable flow rate through a significant length of the column. A reduced inlet/outlet pressure ratio can be obtained by using light molecular weight gases toward which the column packing shows the greatest permeability. The flow rate of the mobile phase is normally adjusted by altering the column inlet pressure for which purpose commercial pressure regulators of sufficient accuracy are available. Quantitative measurements of the flow rate can be made by a number of methods including rotameters, orifice meters, soapfilm flow meters, and displacement of water. The former two methods are the most convenient but the least accurate; moreover, they create a back pressure and are temperature dependent, whereas although the moving soap bubble is cumbersome to employ and unusable for continuous readings, it is preferred when the highest accuracy is required.
