roll slitting and handling The chapter on environmental impact includes waste water treatment and handling air emissions utilization and solid residue generation and mitigation The major paper and board grades and their properties are described Biotechnological methods for paper processing are also presented This handbook is essential reading for Applied Chemists Foresters Chemical Engineers Wood Scientists and Pulp and Paper technologist Engineers and anyone else interested or involved in the pulp and paper industry Provides comprehensive coverage on all aspects of papermaking Covers the latest science and technology in papermaking Includes traditional and biotechnological methods a unique feature of this book Presents the environmental impact of papermaking industries Sets itself apart as a valuable reference that every pulp and papermaker engineer chemist will find extremely useful Paper Chemistry J.C. Roberts, 2012-12-06 Although the title of this book is Paper Chemistry it should be considered as a text about the chemistry of the formation of paper from aqueous suspensions of fibre and other additives rather than as a book about the chemistry of the raw material itself It is the subject of what papermakers call wet end chemistry There are many other excellent texts on the chemistry of cellulose and apart from one chapter on the accessibility of cellulose the subject is not addressed here Neither does the book deal with the chemistry of pulp preparation from wood from other plant sources or from recycled fibres for there are also many excellent texts on this subject The formation of paper is a continuous filtration process in which cellulosic fibres are formed into a network which is then pressed and dried The important chemistry involved in this process is firstly the retention of colloidal material during filtration and secondly the modification of fibre and sheet properties so as to widen the scope for the use of paper and board products As is the fashion these days each chapter is written by an internationally recognised expert in the field and my thanks are extended to all of the contributors for their hours of patient and unseen research during the preparation of their manuscripts
