Knipling, 1992 Factors influencing the behavior and efficiency of host specific parasites Basic principles of pest population suppression by parasite releases Suppression of sugarcane borer populations Suppression of European corn borer populations Suppression of tephritid fruit fly populations Suppression of fall armyworm populations in the Florida overwintering areas Suppression of gypsy moth populations Regulating populations of *Heliothis* species Suppression of boll weevil populations Summary conclusions and practical implications *Predators and Parasitoids* Opende Koul, G. S. Dhaliwal, 2003-03-13 Their natural enemies largely determine the population size and dynamic behavior of many plant eating insects Any reduction in enemy number can result in an insect outbreak Applied biological control is thus one strategy for restoring functional biodiversity in many agroecosystems *Predators and Parasitoids* addresses the role of natural enemies i

Mohamed,Marc De Meyer,2016-12-01 Horticultural sector presents many opportunities for economic development and improving livelihood of growers but several factors constrain production and limit the potential for trade of fruits and vegetables Tephritid fruit flies constitute a major constraint They cause enormous losses through direct feeding damage and loss of market opportunities through imposition of quarantine restrictions by importing countries to prevent entry and their establishment In Africa several native *Ceratitis* and *Dacus* spp and exotic *Bactrocera* and *Zeugodacus* spp species inflict considerable losses to horticulture causing losses ranging from 30 90% Over the past 10 years of R coverage of African native species has been limited largely to *Bactrocera oleae* and *Ceratitis capitata* which are not economically important species in many Africa countries Indeed no book exist that have explicitly addressed economically important African fruit flies and none of the various reviews have specifically focused on the status of the bioecology economic impact and management of exotic and native fruit flies including several potentially invasive *Dacus* species attacking vegetables in Africa This book consolidates this status of knowledge and socio economic impact of various intervention techniques that are currently being applied across Africa The timing of the book is especially pertinent due to the changing fruit fly landscape in Africa caused by arrivals of the highly destructive alien invasives *Bactrocera dorsalis* *B zonata* and *B latifrons* and the priorities African countries have placed recently on export of fruits and vegetables to international markets This is an important reference material for researchers academics and students that are keen at improving horticulture and enhancing food and nutrition security in Africa and beyond **Fruit Fly Pests** Bruce A. Gordh,1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control

Biological Control George E. Heimpel,Nicholas J. Mills,2017-04-03 Biological control is the suppression of populations of pests and weeds by living organisms These organisms can provide important protection from invasive species and protect our environment by reducing the need for pesticides However they also pose possible environmental risks so biological control interventions must be undertaken with great care This book enhances our understanding of biological control interactions by combining theory and practical application Using a combination of historical analyses theoretical models and case studies with explicit links to invasion biology the authors cover biological control of insects weeds plant pathogens and vertebrate animals The book reflects increasing recognition of risks over the past 20 years and incorporates the latest technological advances and theoretical developments It is ideal for researchers and students of biological control and invasion biology
