Diagnosability, Security and Safety of Hybrid Dynamic and Cyber-Physical Systems Moamar Sayed-Mouchaweh, 2018-03-08 Cyber physical systems CPS are characterized as a combination of physical physical plant process network and cyber software algorithm computation components whose operations are monitored controlled coordinated and integrated by a computing and communicating core The interaction between both physical and cyber components requires tools allowing analyzing and modeling both the discrete and continuous dynamics Therefore many CPS can be modeled as hybrid dynamic systems in order to take into account both discrete and continuous behaviors as well as the interactions between them Guaranteeing the security and safety of CPS is a challenging task because of the inherent interconnected and heterogeneous combination of behaviors cyber physical discrete continuous in these systems This book presents recent and advanced approaches and techniques that address the complex problem of analyzing the diagnosability property of cyber physical systems and ensuring their security and safety against faults and attacks The CPS are modeled as hybrid dynamic systems using different model based and data driven approaches in different application domains electric transmission networks wireless communication networks intrusions in industrial control systems intrusions in production systems wind farms etc These approaches handle the problem of ensuring the security of CPS in presence of attacks and verifying their diagnosability in presence of different kinds of uncertainty uncertainty related to the event occurrences to their order of occurrence to their value etc
