Pulker, H.K. Pulker, 1999-03-29 This is the second revised edition of a book that has already proved invaluable to a wide range of readers Written by a scientist for scientists and technical people it goes beyond the subject matter indicated by the title filling the gap which previously existed in the available technical literature It includes a wealth of information for physicists chemists and engineers who need to know more about thin films for research purposes or who want to use this special form of solid material to achieve a variety of application oriented goals

Integration of Fundamental Polymer Science and Technology—3 P.J. Lemstra, L.A. Kleintjens, 2012-12-06 The Rolduc Polymer Meetings of which the contents of this volume represent the third are already on their way to occupying a unique place in the crowded calendar of symposia on every aspect of polymer science and engineering They combine manageable meeting size with a theme Integration of Fundamental Polymer Science and Technology which is often discussed

but seldom realized in practice The technological or applied areas of polymers have perhaps received more emphasis historically than those of other allied disciplines Indeed various plastic and rubber materials were successful items of commerce long before the macromolecular concept itself was firmly established The more fundamental aspects of the field were also largely developed in industrial laboratories The early work of Mark and Meyer at IG Farben and that of Carrothers and Flory at Du Pont are good examples of this The present situation in which polymers are being applied to more and more demanding end uses from high performance materials on the one hand to the biomedical and electronics fields on the other calls for an ever greater understanding of the basic scientific principles governing their behavior It is evident therefore that interactions between those engaged in the pure and applied parts of the field must be promoted effectively The Rolduc Polymer Meetings contribute significantly to such interactions not only by interweaving technological and scientific presentations but also by providing a forum for the participants to discuss problems of mutual interest in all their complexity
