**Union Catalogs, 1963-** ,1964      Cascades and Fields in Perceptual Psychophysics Robert Anthony Mills Gregson,1995  
Psychophysics is by definition mappings between events in the environment and levels of human sensory responses In this  
text the methods of nonlinear dynamics employing trajectories developed for simpler sensory modelling are extended to  
classes of problems which lie at the interface between sensation and perception A diversity of topics for which extensive  
empirical evidence exists are reformulated by writing their dynamics in terms of complex trajectories put into coupled  
lattices and into cascades of such lattices Fundamental relationships between core processes of psychophysics in time and  
space and recurrent quantitative or topological distortions of the physical world which arise in perception are given a  
treatment which contrasts fundamentally with traditional linear equations in use since the 19th century      **A Guide to**
