The choice of color plays a great role in shaping the user experience. The studies on the associations between colors and certain meanings show that companies can visually represent their message and engage the customer base with appropriate colors (Barševska & Rakele, 2019). For example, blue is the most used color for social media applications and websites – Facebook, Twitter, LinkedIn, and other applications use a blue hue to manufacture a clean, technology-driven, and credible image (Barševska & Rakele, 2019). Different colors can also help signify stability, fun, creativity, and other characteristics that attract a desired audience. Furthermore, the design of each page also benefits from correct contrasts and simplicity – the user has to see the text, buttons, and other elements of the page to interact with them. Color helps to highlight areas for clicking and guiding users through the content organically, assisting them in reaching their goals.

The information gathered from research demonstrates how specific tips for using color can help one create an effective app. Based on this knowledge, it is necessary to consider choosing a specific recognizable color to identify my application. The color will be based on common associations, and I aim to research how distinct hues are seen by the audience I wish to engage with the app. I will also focus on a clear and simple design to avoid confusion and provide the best user experience. For example, Barševska and Rakele (2019) recommend starting the development process in white and black to see whether the format is understandable enough without color. Then, I will add accents that make the app unique and memorable.

Sound is another important element of designing to improve user experience. Different tones allow the application to stand out even if they are working in the background mode (Faller, 2019). Some sounds can increase stress in people, while others can attract attention without negatively affecting them (Faller, 2019). In my experience, short and moderately loud melodies work well, and many apps use tones resembling a bell. A proper sound cue may stimulate the user to interact with an app more frequently or perform certain activities within the application. Smartphones use sounds to notify the user, while TVs incorporate auditory cues to support people with
