implementation of digital printing technology *2.5D Printing* Carinna Parraman, Maria V. Ortiz Segovia, 2018-10-22 A guide that examines the history and current state of 2.5D printing and explores the relationship between two and three dimensions

2.5D Printing Bridging the Gap Between 2D and 3D Applications examines the relationship between two and three dimensional printing and explores the current ideas, methods and applications. It provides insights about the diversity of our material culture and heritage and how this knowledge can be used to design and develop new methods for texture printing. The authors review the evolving research and interest in working towards developing methods to capture and model the surface qualities of 3D and 2D objects, represent the appearance of surface material and textural qualities and print or reproduce the material and textural qualities. The text reflects information on the topic from a broad range of fields including science, technology, art, design, conservation, perception and computer modelling.

2.5D Printing Bridging the Gap Between 2D and 3D Applications provides a survey of traditional methods of capturing 2.5D through painting and sculpture and how the human perception is able to judge and compare differences. This important text bridges the gap between the technical and perceptual domains of 2D and 3D printing. Discusses perceptual texture, color illusion and visual impact to offer a unique perspective. Explores how to print a convincing rendering of texture that integrates the synthesis of texture in fine art paintings with digital deposition printing. Describes contemporary methods for capturing surface qualities and methods for modelling and measuring and ways that it is currently being used. Considers the impact of 2.5D for future technologies.

2.5D Printing is a hands on guide that provides visual inspiration, comparisons between traditional and digital technologies, case studies and a wealth of references to the world of texture printing. Please visit the companion website at www.wiley.com/go/bridging2d3d

Screen Printing Technology Hand Book NIIR Board, 2003-02-08 Screen printing is a printing technique that uses a woven mesh to support an ink blocking stencil. The attached stencil forms open areas of mesh that transfer ink or other printable materials which can be pressed through the mesh as a sharp edged image onto a substrate. A roller or squeegee is moved across the screen stencil forcing or pumping ink past the threads of the woven mesh in the open areas. Screen printing proves to be a good printing process for multi colour printing. Half tone printing is related to screen printing of photographs. Printings of photographs was at one time considered to be very difficult in screen printing but now screen printed halftone photographs are also effective and economical in certain types of reproduction. Over the time stickers transfer have become an important medium of advertising. Now millions of stickers are printed every year through this method. Transfer stickers are of three types: instant transfer, heat transfer and water based transfer. Gumming is an integral part of sticker production. Screen printing technique makes use of and is compatible with a variety of materials including textiles, ceramics, metal, wood, paper, glass and plastic. It is this quality that allows this printing technique to be used in different industries from clothing to product labels, fabric labels to circuit board printing etc. Screen printing industry experiences growth in the 10 to 15% per year rate.
