Private Forestry Policy In Western Europe:

Private Forestry Policy in Western Europe Arnold John Grayson, 1993 Private ownership is the main form of tenure of woodlands and forests in Britain and Western Europe Recent changes in legislation in the UK concerning financial aspects of forest ownership plus the advent of the single European market are likely to increase the interest of foreign investment in afforestation Against this background the Scottish Forestry Trust commissioned a study to examine policies for private forestry across Western Europe This book is an outcome of this study which had four main purposes to describe policy towards private forestry in several European countries to identify methods of policy formulation and trends in the content and balance of objectives for such policies to describe methods of implementing policy and quantify the financial implications and to suggest changes in implementation methods that might be appropriate to Britain The book is of interest to academics and practitioners concerned with forestry from the perspectives of economics policy making planning or investment

Forest Policy for Private Forestry Lawrence Dale Teeter, Benjamin William Cashore, Daowei Zhang, 2002-12-06
Annotation There is currently great concern about the sustainability of forestry and the contribution of private forestry towards this aim The need to better understand the impact of different policy choices on private forestry has never been more important This book includes a selection of peer reviewed papers from a conference held in Atlanta in March 2001

Communities and Forest Management in Western Europe Sally Jeanrenaud, 2001 Fourth in the series this profile explores the diverse and changing nature of Community Involvement in Forest Management CIFM in Western Europe It provides some comparative European level data on important social institutions which shape patterns of community involvement in forestry and it briefly examines different national contexts Through 12 case studies this publication discusses some of the main economic social ecological and policy opportunities and challenges of CIFM in Europe and outlines the principal lessons learned according to three key groups of actors governments NGOs and local communities The profile also proposes some recommendations for policy and action in Europe

European Forest Policy and Governance Filip Aggestam, 2024-11-29
This book provides a state of the art overview covering distinct and relevant aspects of forest policy processes in Europe presenting a fresh perspective on different analytical approaches theories and frameworks Set against the background of a changing world driven by significant social environmental and economic developments in Europe and elsewhere there is a growing need for an improved understanding of forest governance and how to analyse the forest policymaking processes This book introduces the reader to some of the key issues typically encountered in reviewing proposed as well as established forest policies focusing on five socially relevant topics for the forest based sector today namely European forest governance under a green new deal Systemic changes and the circular bio economy Social changes connected with forest ownership and forest actors Nature conservation and the pursuit of multifunctional forests Living with forest fires and climate change In so doing this book presents a set of timely and rich case studies relevant to the study of forest governance In the final chapter it

puts forward an innovative and systematic method for selecting the most appropriate analytical tool that accounts for the constraints and objectives involved in monitoring forest policy The book is accompanied by chapter level exercises and online Support Material which details the various approaches theories and frameworks discussed in the book providing direct links back to individual chapters discussion points and a step by step guide for how each method can be applied This book will be an essential read for forestry students and scholars and professionals and policymakers working on forest policy and forest management

Trends in Forestry Law in Europe and Africa Maria Teresa Cirelli, Food and Agriculture Organization of the United Nations, 2001-01-01 Recent years have witnessed a significant acceleration in the revision of forest laws around the world Forest law increasingly recognizes the multiple interests involved in or affected by forest management with greater attention given to the environmental and social roles of forest resources and to their sustainable management and use In addition renewed emphasis is being placed on the involvement of a wider range of public and private actors Issues in which forest laws have been reoriented include local forest and private management the environmental functions of forests forest management planning and forest utilization contracts

Policy That Works for Forests and People James Mayers, Stephen Bass, 2013-06-17 Since its original publication by the International Institute for Environment and Development in 1999 Policy That Works for Forests and People has been recognised as the most authoritative study to date of policy processes that affect forests and people Providing a thorough analysis of the issues options and factors that determine different outcomes and bolstered by a major annex containing tools and tactics the book offers clear and practical advice on how to formulate manage and implement policies appropriate to different contexts These are policies that result in real improvements in the governance use and economic benefits that can flow from forests to those who depend upon them This book is essential reading for policy makers forestry practitioners and academics and students in all areas of forest policy management and governance

Global Environmental Forest Policies Constance McDermott, Benjamin Cashore, Peter Kanowski, 2010 This book provides a uniquely detailed and systematic comparison of environmental forest policies and enforcement in twenty countries worldwide covering developed transition and developing economies The goal is to enhance global policy learning and promote well informed and precisely tuned policy solutions

European Forest Sector Outlook Study 1960-2000-2020 United Nations. FAO/ECE Trade Development and Timber Division. Timber Branch, 2005 This study prepared jointly by FAO and UNECE sets out data on long term trends and projections for future developments in the forestry sector for 38 countries in western and eastern Europe including the three Baltic states and four major CIS countries including Russia covering the years 1960 to 2020 It is based on scientific analysis and covers forest resources and the production trade and consumption of roundwood sawnwood panels pulp and paper as well as the outlook for non wood products and forest services It also examines the links with other sectoral policies such as energy environmental trade and rural development policies and sets out a number of policy conclusions and recommendations

Plantation Silviculture in

Europe Peter Savill, Julian Evans, Daniel Auclair, Jan Falck, 1997-09-18 Plantation Silviculture in Europe provides an up to date succinct and comprehensive overview of current European plantation forestry practices Recognising that plantation silviculture today is no longer largely a question of how to grow large scale industrial plantations the authors have included chapters describing other more diverse reasons for establishing trees Forestry practices are set in the context of the science behind them and their environmental social and policy frameworks Concise and clear this will be essential reading for forestry students and professionals alike As pressures to preserve natural forest resources have increased plantation forestry and its study have gained in importance Plantation Silviculture in Europe is an up to date timely and comprehensive exploration of the principles that underlie the planting and maintaining of forest resources Based on the excellent reception of Savill and Evans Plantation Silviculture in Temperate Regions OUP 1986 which was largely UK based the inclusion of two European authors ensures that the scope of this new book extends across the entire continent Plantation Silviculture in Europe provides a thorough overview of the central aspects of conventional plantation forestry covering site preparation choice of species establishment and maintenance nutrition spacing thinning and pruning and protection In addition it acknowledges the changing emphasis and increasing diversity of contemporary forestry and includes chapters on community woodlands urban forests plantings for amenity and sport and energy crops Throughout an attempt is made to set practices in the context of the ecological and biological forest processes which underpin them Plantation Silviculture also incorporates discussion of the many environmental social and policy issues that surround forestry today Concise and clearly written this will be essential reading for graduate and undergraduate forestry students and forestry professionals alike Likely to become the standard text throughout Europe it also contains much material of relevance to foresters in North America East Asia and Australasia

The Wealth of Forests Chris Tollefson, 1998 These are turbulent unpredictable yet opportune times for Canadian forestry Never before have competing demands on Canada's forest resources been so great At the same time we are finally being forced to confront the sustainable limit of these resources Now the improbable has happened government industry First Nations and NGOs appear to be part of an emerging consensus that industrial forestry in Canada must change The Wealth of Forests is a pioneering attempt to grapple with the policy implications of the transition to sustainable forestry While much has been written on the theory and practice of sustainable forestry and on the relative merits of regulatory versus market approaches to environmental protection these literatures have not as yet been bridged Using illustrations based on recent developments in British Columbia forest policy this collection provides that bridge by analyzing the potential and limits of market regulatory and other policy instruments as means of achieving sustainability Featuring new work by many of Canada's leading forest policy scholars this interdisciplinary collection is devoted to translating the concept of sustainability into practice in key areas of forest policy including tenure timber pricing forest practices land use zoning and eco certification The Wealth of Forests also considers how domestic and international legal regimes might constrain the

adoption of policies that could bring us close to the elusive goal of sustainable forestry **Silvicultural Research and the Evolution of Forest Practices in the Douglas-fir Region** ,2007 Silvicultural practices in the Douglas fir region evolved through a combination of formal research observation and practical experience of forest managers and silviculturists and changing economic and social factors This process began more than a century ago and still continues It has had a great influence on the economic well being of the region and on the present characteristics of the regions forests This long history is unknown to most of the public and much of it is unfamiliar to many natural resource specialists outside and even within the field of silviculture We trace the history of how we got where we are today and the contribution of silvicultural research to the evolution of forest practices We give special attention to the large body of information developed in the first half of the past century that is becoming increasingly unfamiliar to both operational foresters and perhaps more importantly to those engaged in forestry research We also discuss some current trends in silviculture and silviculture related research

Afforestation Experience in the Nordic Countries Finn Helles, Michael Linddal, 1996 Afforestation Experience in the Nordic Countries **Agroforestry for Natural Resource Management** Ian Nuberg, Brendan George, Rowan Reid, 2009-05-18 In its early days agroforestry may have been viewed as the domain of the landcare enthusiast Today integrating trees and shrubs into productive farming systems is seen as a core principle of sustainable agriculture Agroforestry for Natural Resource Management provides the foundation for an understanding of agroforestry practice in both high and low rainfall zones across Australia Three major areas are discussed environmental functions of trees in the landscape ecosystem mimicry hydrology protection of crops animals and soil biodiversity aesthetics productive functions of trees timber firewood pulp fodder integrated multi products and the implementation of agroforestry design evaluation establishment adoption policy support The book also includes a DVD that features videos on forest measurement and harvesting a Farm Forestry Toolbox and many regionally specific agroforestry resources Written by leading researchers and practitioners from around Australia Agroforestry for Natural Resource Management will be an essential resource for students in agroforestry courses as well as a valuable introduction to the field for professionals in related areas Ecosystem Goods and Services from Plantation Forests Jurgen Bauhus, Peter van der Meer, Markku Kanninen, 2010-09-23 Plantation forests often have a negative image They are typically assumed to be poor substitutes for natural forests particularly in terms of biodiversity conservation carbon storage provision of clean drinking water and other non timber goods and services Often they are monocultures that do not appear to invite people for recreation and other direct uses Yet as this book clearly shows they can play a vital role in the provision of ecosystem services when compared to agriculture and other forms of land use or when natural forests have been degraded This is the first book to examine explicitly the non timber goods and services provided by plantation forests including soil water and biodiversity conservation as well as carbon sequestration and the provision of local livelihoods The authors show that if we require a higher provision of ecosystem goods and services from

both temperate and tropical plantations new approaches to their management are required These include policies methods for valuing the services the practices of small landholders landscape approaches to optimise delivery of goods and services and technical issues about how to achieve suitable solutions at the scale of forest stands While providing original theoretical insights the book also gives guidance for plantation managers policy makers conservation practitioners and community advocates who seek to promote or strengthen the multiple use of forest plantations for improved benefits for society

Published with CIFOR General Technical Report PNW-GTR ,2007 Forested Landscapes in Perspective National Research Council,Board on Agriculture,Committee on Prospects and Opportunities for Sustainable Management of America's Nonfederal Forests,1998-05-01 The federal role in the management of nonfederal U S forests was once relatively simple to assist in the prevention and control of wildfires The administrative structure to carry out this role was similarly uncomplicated with most programs under the aegis of the U S Department of Agriculture In recent years however both the management and administrative landscapes have changed dramatically Responsibility for the federal role in nonfederal forests has been expanded to include a number of cabinet departments and independent agencies which must address critical issues such as reforestation wetlands disruption and biodiversity protection With two thirds of all U S forests on nonfederal lands these issues are becoming increasingly more important Now a first of its kind examination of the federal role in nonfederal forest management *Forested Landscapes in Perspective* presents a comprehensive look at the current landscape and recommends improvements that best serve public and private interests This timely volume includes an insightful description of the current situation and recent trends followed by a thorough examination of major policy and program issues affecting nonfederal forests Among these are emerging environmental concerns such as forest fragmentation and large scale climate change as well as issues of economic importance such as the availability of timber supplies *Forest Community Connections* Ellen Donoghue,Victoria Sturtevant,2010-09-30 The connections between communities and forests are complex and evolving presenting challenges to forest managers researchers and communities themselves Dependency on timber extraction and timber related industries is no longer a universal characteristic of the forest community Remoteness is also a less common feature as technology workforce mobility tourism and amenity migrants increasingly connect rural to urban places *Forest Community Connections* explores the responses of forest communities to a changing economy changing federal policy and concerns about forest health from both within and outside forest communities Focusing primarily on the United States the book examines the ways that social scientists work with communities their role in facilitating social learning informing policy decisions and contributing to community well being Bringing perspectives from sociology anthropology political science and forestry the authors review a range of management issues including wildfire risk forest restoration labor force capacity and the growing demand for a growing variety of forest goods and services They examine the increasingly diverse aesthetic and cultural values that forest residents attribute to forests the factors that contribute to

strong and resilient connections between communities and forests and consider a range of governance structures to positively influence the well being of forest communities and forests including collaboration and community based forestry

Journal of the Royal Society of Arts Royal Society of Arts (Great Britain),1921 *Journal* ,1921 The Evolution of Resource Property Rights Anthony Scott,2008-03-27 This book traces the development of the standard property rights over five kinds of natural resource inland rivers ocean fisheries petroleum resources gold and base metals and forest resources from classical times through to the 19th century Completely private resources and those in the public or Crown lands are given equal attention and a simple supply and demand model is used to explain how property rights are altered over time Scott also provides the reader with a unique set of characteristics for defining rights and numerous case studies and examples of their evolution highlighting the increasing recourse to common law courts and government legislation and the problems caused by competing demands on the same limited resources This book provides a unique insight into the historical development of property rights and makes a special plea for the multiple purpose and multi owner management of resource rights It will provide a valuable resource for those interested in resource management economic history property rights and development
