Nanofabrication Ampere A. Tseng, 2008 Many of the devices and systems used in modern industry are becoming progressively smaller and have reached the nanoscale domain Nanofabrication aims at building nanoscale structures which can act as components devices or systems in large quantities at potentially low cost Nanofabrication is vital to all nanotechnology fields especially for the realization of nanotechnology that involves the traditional areas across engineering and science This is the first book solely dedicated to the manufacturing technology in nanoscale structures devices and systems and is designed to satisfy the growing demands of researchers professionals and graduate students Both conventional and non conventional fabrication technologies are introduced with emphasis on multidisciplinary principles methodologies and practical applications While conventional technologies consider the emerging techniques developed for next generation lithography non conventional techniques include scanning probe microscopy lithography self assembly and imprint lithography as well as techniques specifically developed for making carbon tubes and molecular circuits and devices

Organic Thin Film Transistor Integration Flora Li, Arokia Nathan, Yiliang Wu, Beng S. Ong, 2011-03-21 Research on organic electronics or plastic electronics is driven by the need to create systems that are lightweight unbreakable and mechanically flexible With the remarkable improvement in the performance of organic semiconductor materials during the past few decades organic electronics appeal to innovative practical and broad impact applications requiring large area coverage mechanical flexibility low temperature processing and low cost Thus organic electronics appeal to a broad range of electronic devices and products including transistors diodes sensors solar cells lighting displays and electronic identification and tracking devices A number of commercial opportunities have been identified for organic thin film transistors OTFTs ranging from flexible displays electronic paper radio frequency identification RFID tags smart cards to low cost disposable electronic products and more are continually being invented as the technology matures The potential applications for plastic electronics are huge but several technological hurdles must be

overcome In many of these applications transistor serves as a fundamental building block to implement the necessary electronic functionality Hence research in organic thin film transistors OTFTs or organic field effect transistors OFETs is eminently pertinent to the development and realization of organic electronics This book presents a comprehensive investigation of the production and application of a variety of polymer based transistor devices and circuits It begins with a detailed overview of Organic Thin Film Transistors OTFTs and discusses the various possible fabrication methods reported so far This is followed by two major sections on the choice optimization and implementation of the gate dielectric material to be used Details of the effects of processing on the efficiency of the contacts are then provided The book concludes with a chapter on the integration of such devices to produce a variety of OTFT based circuits and systems The key objective is to examine strategies to exploit existing materials and techniques to advance OTFT technology in device performance device manufacture and device integration Finally the collective knowledge from these investigations facilitates the integration of OTFTs into organic circuits which is expected to contribute to the development of new generation of all organic displays for communication devices and other pertinent applications Overall a major outcome of this work is that it provides an economical means for organic transistor and circuit integration by enabling the use of a well established PECVD infrastructure while not compromising the performance of electronics The techniques established here are not limited to use in OTFTs only the organic semiconductor and SiNx combination can be used in other device structures e g sensors diodes photovoltaics Furthermore the approach and strategy used for interface optimization can be extended to the development of other materials systems Official Gazette of the United States Patent and Trademark Office ,2002
