## Shadows Four:

*Shades and Shadows* Jules Pillet, 1896      *Grasping Shadows* William Chapman Sharpe, 2017-08-04 What's in a shadow? Menace, seduction or salvation? Immaterial but profound shadows lurk everywhere in literature and the visual arts, signifying everything from the treachery of appearances to the unfathomable power of God. From Plato to Picasso, from Rembrandt to Welles and Warhol, from Lord of the Rings to the latest video game, shadows act as central players in the drama of Western culture. Yet because they work silently, artistic shadows often slip unnoticed past audiences and critics. Conceived as an accessible introduction to this elusive phenomenon, *Grasping Shadows* is the first book that offers a general theory of how all shadows function in texts and visual media. Arguing that shadow images take shape within a common cultural field where visual and verbal meanings overlap, William Sharpe ranges widely among classic and modern works, revealing the key motifs that link apparently disparate works such as those by Fra Angelico and James Joyce, Clementina Hawarden and Kara Walker, Charles Dickens and Kumi Yamashita. Showing how real-world shadows have shaped the meanings of shadow imagery, *Grasping Shadows* guides the reader through the techniques used by writers and artists to represent shadows from the Renaissance onward. The last chapter traces how shadows impact the art of the modern city, from Renoir and Zola to film noir and projection systems that capture the shadows of passers-by on streets around the globe. Extending his analysis to contemporary street art, popular songs, billboards, and shadow theatre, Sharpe demonstrates a practical way to grasp the dark side that looms all around us.

*The Fourth Dimension and Non-Euclidean Geometry in Modern Art*, revised edition, Linda Dalrymple Henderson, 2018-05-18. The long-awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art. In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher fourth dimension of space—were central to the development of modern art. The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher-dimensional existence. That iconoclastic idea encouraged radical innovation by a variety of early twentieth-century artists, ranging from French Cubists, Italian Futurists, and Marcel Duchamp to Max Weber, Kazimir Malevich, and the artists of De Stijl and Surrealism. In an extensive new Reintroduction, Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000. Although largely eclipsed by relativity theory beginning in the 1920s, the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s. In a remarkable turn of events, it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics, with its ten or eleven-dimensional universes, and computer graphics. Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller, Robert Smithson, and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak.
