Snakes, Sunrises, and Shakespeare Gordon H. Orians, 2014-04-14

The eminent zoologist extends his pioneering work in evolutionary biology to examine our preferences, predilections, fears, hopes, and aspirations. Stephen R. Kellert, author of *Birthright*, Why do we jump in fear at the sight of a snake and marvel at the beauty of a sunrise? These impulsive reactions are no accident. In fact, many of our human responses to nature are steeped in our evolutionary past: we fear snakes because of the danger of venom, and we welcome the assurances of sun as the predatory dangers of night disappear. According to evolutionary biologist Gordon Orians, many of our aesthetic preferences, from the kinds of gardens we build to the foods we enjoy and the entertainment we seek, are the lingering result of natural selection. In *Snakes, Sunrises, and Shakespeare*, Orians explores the role of evolution in human responses to the environment, applying biological perspectives ranging from Darwin to current neuroscience. Orians reveals how our emotional lives today are shaped by decisions our ancestors made centuries ago on African savannas as they selected places to live, sought food and safety, and socialized in small hunter-gatherer groups. During this time, our likes and dislikes became wired in our brains as the appropriate responses to the environment meant the difference between survival or death. His rich analysis explains why we mimic the tropical savannas of our ancestors in our parks and gardens, why we are simultaneously attracted to and repelled by danger, and how paying close attention to nature's sounds has made us an unusually musical species.

Bede, The Reckoning of Time Bede (Venerabilis.), Bede Venerabilis (helgon.), el Venerable Bede (Santo), Bede Venerabilis Staff, Bede, the Venerable, Saint, 673-735, 1999-01-01

From the patristic age until the Gregorian calendar reform of 1582, computus, the science of time reckoning and art of calendar construction, was a matter of intense concern. Bede's *The Reckoning of Time* (*De temporum ratione*) was the first comprehensive treatise on this subject and the model and reference for all subsequent teaching, discussion, and criticism of

the Christian calendar It is a systematic exposition of the Julian solar calendar and the Paschal table of Dionysius Exiguus with their related formulae for calculating dates But it is more than a technical handbook Bede sets calendar lore within a broad scientific framework and a coherent Christian concept of time and incorporates themes as diverse as the theory of tides and the doctrine of the millennium This translation of the full text of *The Reckoning of Time* includes an extensive historical introduction and a chapter by chapter commentary It will interest historians of medieval science theology and education Bede scholars and Anglo Saxonists liturgists and Church historians It will also serve as an accessible introduction to computus itself Generations of medieval computists nourished their expertise in Bede s orderly presentation modern scholars in quest of safe passage through this complex terrain can hope for no better guide
