Ronald J Macgregor

Shadows Of The Mind A Search For The Missing Science Of Consciousness:

Shadows of the Mind Roger Penrose,1994 Presents the author s thesis that consciousness in its manifestation in the human quality of understanding is doing something that mere computation cannot and attempts to understand how such non computational action might arise within scientifically comprehensive physical laws

Shadows of the Mind Roger Penrose,1996

On the Nature of Consciousness Harry T. Hunt,1995-01-01 Harry Hunt begins by reviewing the renewed interest in ordinary consciousness and in altered and transpersonal states of consciousness He then presents competing views of consciousness in cognition neurophysiology and animal psychology developing a view of perceptual awareness as the core of consciousness potentially shared across species

On The Contexts Of Things Human: An Integrative View Of Brain, Consciousness, And Freedom Of Will Ronald J Macgregor,2006-04-11 This book is unique in expanding the boundaries of neuroscience while remaining solidly grounded within it In this it outlines a new plateau of wider integrative understanding both within and beyond neuroscience The book advances the view and implications of an integrated functional unity of consciousness and brain inclusive of freedom of will It reaches from first principles of human awareness and apprehension and the physical foundations of consciousness through a structured integrative view of consciousness and the brain to outlines of the ambient contextual influences of human living Comprehensive overviews of brain theory and theoretical neuroscience are given Fundamental brain functions of human apprehension language value aesthetics rational and extrarational knowing biological primals and adaptive integrations are seen to operate within such ambient influences as whole of nature human plight circumstances personal life good and evil inner depths worlds of man and enlightenments Prof Ronald MacGregor has published extensively in theoretical neuroscience since 1965 consistently advocating the foundationality of physiology and physical law in brain mind function His work has helped ground neuroelectric signaling within physical science and characterize the neuroelectric patterns of neurons and neural networks

A Science-Theology Rapprochement Cyril Orji,2018-10-12 This timely and fascinating work addresses questions of ultimate concerns for Christian believers by clarifying what religious believers statement God creates means in relation to the mechanistic determinism of science enthusiasts and the New Atheist Movement Drawing from the methodological works of C S Peirce Bernard Lonergan and Wolfhart Pannenberg the book creatively shows how the old science theology conflict or warfare can be turned into one of collaboration or rapprochement Using the works of these three thinkers it departs from the common practice of treating the field of science theology as an abstract mainstream theology The book takes a stand on contextual theology treating the problem posed by Richard Dawkins and his fellow New Atheists as one in need of a creative solution It also suggests that the dialogue between science and theology must take seriously the experiences and challenges from different social and cultural contexts The text shows how these experiences can lead to the kind of creative theological thinking we see in the works of Pannenberg and Lonergan who both explicate not only how an understanding of an

evolutionary universe is compatible with the Christian doctrine of creation but also how a methodological comparison of science and theology reveals a common concern for human understanding and openness to divine agency **Origins of**

Mind Liz Swan,2012-12-22 The big question of how and why mindedness evolved necessitates collaborative multidisciplinary investigation Biosemiotics provides a new conceptual space that attracts a multitude of thinkers in the biological and cognitive sciences and the humanities who recognize continuity in the biosphere from the simplest to the most complex organisms and who are united in the project of trying to account for even language and human consciousness in this comprehensive picture of life The young interdisciplinary of biosemiotics has so far by and large focused on codes signs and sign processes in the microworld a fact that reflects the field's strong representation in microbiology and embryology What philosophers of mind and cognitive scientists can contribute to the growing interdisciplinary are insights into how the biosemiotic *weltanschauung* applies to complex organisms like humans where such signs and sign processes constitute human society and culture THE MIND OF GOD REVEALED:Hindu Wisdom Holds the Key to the Modern Science

Dr.Surendra Dass,2025-07-19 The Mind of God Revealed is a bold and visionary exploration that bridges the timeless wisdom of ancient Hindu philosophy with the revolutionary frontiers of modern science In this groundbreaking work Dr Surendra Dass challenges conventional boundaries between science and spirituality revealing how the two may be deeply intertwined aspects of the same cosmic truth Are we truly free beings or biological machines bio robots following a pre coded script Drawing from neuroscience and artificial intelligence the book introduces the Bio Robot Hypothesis suggesting that much of human behaviour operates like an algorithm But who is the programmer Hindu philosophy offers an answer describing the human body as a yantra machine guided by Atman the eternal consciousness Through compelling correlations between the Brahmanda Purana and the Big Bang the concept of karma as a cosmic algorithm and the striking parallels between quantum physics and Vedic cosmology the book reveals a profound and unified understanding of reality Ideas like reincarnation parallel universes and the illusion of free will are examined through both scientific insight and spiritual perspective The Mind of God as revealed in this book is not the God of dogma or mythology It is not a deity seated on a celestial throne dictating the fate of mortals It is the intelligence that breathes life into existence the silent force that weaves together matter and thought reality and illusion It is the grand design glimpsed by both ancient sages in their deepest meditations and modern physicists in their most intricate ca

Evidence for Psi Damien Broderick,Ben Goertzel,2014-11-19 Psi is the term used by researchers for a variety of demonstrable but elusive psychic phenomena This collection of essays provides a detailed survey of the evidence for psi at the level of scientific examination Key features of apparent psi phenomena are reviewed including precognition and remote perception knowledge of future or distant events that cannot be inferred from present information presentiment physiological responses to stimuli that have not yet occurred the effects of human emotions on globally dispersed machines the possible impact of local sidereal time on psi performance and the familiar feeling of knowing who is

calling on the phone Special attention is given to those phenomena that make it difficult for scientists to get a clear understanding of psi The body of psi research while complex and frustrating is shown to contain sufficiently compelling positive evidence to convince the rational open minded observer that psi is real and that one or more physical processes probably underlie observed psi phenomena **The Rosetta Stone of the Human Mind** Vincenzo Sanguineti,2006-12-26

The study of the brain mind complex has been hampered by the dichotomy between objective biological neuroscience and subjective psychological science This book presents a new theoretical model for how to translate between the two using a third language nonlinear physics and mathematics It illustrates how the simultaneous use of these two approaches enriches the understanding of the neural and mental realms *Embodying the Dharma* David Germano,Kevin Trainor,Associate Professor of Religion Kevin Trainor,2004-10-27 Examines the practice of relic veneration in a variety of forms of Buddhism

What Is Life and How Might It Be Sustained? Jim Lynch,2022-07-14 How did the universe and life begin and what are the threats to people and the environment in a pandemic This book is for anybody with interest in protecting life on the planet Studies on the origin of life and scientific contributions to safeguarding the planet are examined in light of current thinking on climate change A major focus is the spread of microbes put in the context of environmental assessment and management including descriptions of microbiomes and a consideration of the risks of genetic modifications Professor Lynch shows how failure to control disease can lead to the collapse of any biotic population To avoid this the ethics of management of disease by biological control and by vaccination are discussed at the practical level and in a moral theological context

Free Thought, Faith, and Science Roger Pullin,2014-10-04 This book is about thought not the basic thought that we use to determine what to eat or wear or buy but the Free Thought we use to make personal choices about the higher things of life faith or unbelief justice morality and the development and use of our creativity Free Thought can have any outcome including unbelief or faith which is defined here as personal belief and trust in God not as a religious affiliation Free Thought is founded on free will Everyone is a unique combination of a material body mind and a spiritual soul Free Thought is the integrated and iterative processing of information from the material and spiritual realms in one or more common nonmaterial formats across a mind soul interface Through our Free Thought God and the spiritual force for evil change us and we change the material realm All truthful spiritual insights and truthful disclosures through mathematics and science come from God and it is through faith and science that we approach one whole body of truth Free Thought Faith and Science includes definitions of terms summaries of the author s beliefs and background a literature review and a questionnaire for readers It s a comprehensive and thought provoking book that will contribute to bringing more believers and nonbelievers together in an expansion of the faith science quest for truth **THE STORY OF SOUND III** Vikas Roy,2025-06-19 A Deep Inquiry into the Evolutionary Architecture of Matter and Mind This third volume of the Energy Field Form Theory embarks on a critical exploration of how the universe evolved two distinct yet interconnected pathways one leading to the crystallization of matter

and the other to the rise of life and cognition Building on the foundational principles of nested field dynamics resonance and essence transformation established in previous volumes this work presents a unified mechanism for understanding biological evolution species differentiation and the genesis of cognitive identity At the heart of this volume lies the insight that all complexity whether inert or alive arises from field form interactions guided by the density principle and echo alignment Matter emerges when energy stabilizes within low resonance nested fields Conversely life arises when energy enters recursive resonance within nested structures DNA neurons and environments producing dynamic feedback loops capable of adaptation memory and identity Key highlights include The Divergence of Evolutionary Pathways A bifurcation model illustrating how field interactions in the primordial vacuum led to the simultaneous evolution of structured matter atoms molecules minerals and recursive living systems bacteria to human cognition Cognitive Identity Formation A model where external echoes neural oscillations and DNA resonance form a stabilizing loop marking the birth of persistent thought structures and identity signatures Species Evolution as Field Reconfiguration A reinterpretation of reproduction mutation and hybridization not as random phenomena but as resonance based events driven by nested field compatibility Language Desire and Thought The volume tracks the emergence of emotional categories symbolic actions and inner speech as natural byproducts of field resonance fusing psychological evolution with cellular and molecular structures Transdomain Validations By mapping interactions across physics biology and consciousness the theory demonstrates consistent field mechanisms underpinning phenomena from subatomic bonding to planetary life evolution Drawing on ancient insights from the Vedas and Upanishads to early yoga and symbolic systems this volume reinterprets myth as layered metaphor for nested field truths Simultaneously it remains grounded in modern science invoking neuroscience quantum biology and cognitive theory to validate the universality of its claims As this volume bridges the evolutionary leap from formless energy to thinking life it sets the stage for understanding cognition as not merely an emergent property but a culmination of patterned field alignments echoing the logic of the universe itself

Philosophy of Mind A-Z Marina Rakova,2006-07-11 A comprehensive guide to the main positions debates key figures and problems as well as important terms in the philosophy of mind Philosophy of Mind A Z contains entries on historical and contemporary key figures explaining the importance of the longstanding debates and how the contemporary field has been shaped It covers both traditional and current topics and even those topics that are only beginning to emerge It includes a wide range of philosophy of mind from Plato and Leibniz to externalism and the frame problem from Husserl to neural Darwinism from mental causation to the problem of consciousness All of these issues are explained in compact clearly written entries where difficult topics are introduced with the help of numerous examples Philosophy of Mind A Z is a reliable and friendly guide for anyone studying philosophy of mind or cognitive science or simply interested in the many sides and facets of our mental life [The Science of Religion: A Defence](#) Donald Wiebe,2018-10-16 Donald Wiebe Professor of Philosophy of Religion at Trinity College University of Toronto has spent much of his academic

career arguing for a clear demarcation between Theology and Religious Studies

The Science of Religion A Defence offers a brilliant overview of Professor Wiebe's contributions on methodology in the academic study of religion of the development of his thinking over time and of his intellectual commitment to a science of religion The work is divided into three parts The first part identifies pertinent connections between religion religious studies and science and why reductionism in the academic study of religion when properly applied can bridge the explanatory gap between the sceptic and the devotee The second part treats conceptual debates in the academic study of religion with particular reference to the place of belief understanding and meaning in the modern study of religion The third part addresses the theological resistance to the scientific study of religion and how that resistance can be overcome Finally two new essays are included a critique on *The Preconceptions of a Science of Religion* by Anthony J Palma and an accompanying reply by Donald Wiebe *The Science of Religion A Defence* is an essential resource for both scholarly and non scholarly audiences alike and will be of particular interest to both defenders and critics of a scientific study of religion

Unbelievable Graham Ward, 2014-09-30 Why believe What kinds of things do people believe in How have they come to believe them And how does what they believe or disbelieve shape their lives and the meaning the world has for them For Graham Ward who is one of the most innovative writers on contemporary religion these questions are more than just academic They go to the heart not only of who but of what we are as human beings Over the last thirty years our understandings of mind and consciousness have changed in important ways through exciting new developments in neuroscience The author addresses this quantum shift by exploring the biology of believing He offers sustained reflection on perception cognition time emotional intelligence knowledge and sensation Though the truth of belief remains under increasing attack in a thoroughly secularised context Ward boldly argues that secularity is itself a form of believing Pointing to the places where prayer and dreams intersect this book offers a remarkable journey through philosophy theology and culture thereby revealing the true nature of the human condition

Good Looking Barbara Maria Stafford, 1996 Challenging the reflexive identification of images with vice

Panpsychism Godehard Brüntrup, Ludwig Jaskolla, 2017 Recent debates in philosophy of mind have resulted in an impasse which lead to a renaissance of panpsychism as a viable alternative Panpsychism is the thesis that mental being is a fundamental and ubiquitous feature of the universe This book collects many of the most recent voices arguing for panpsychism as a genuine alternative in analytic philosophy of mind in the 21st century as well as some of the most prominent critics

The Philosophy of Creativity Elliot Samuel Paul, Scott Barry Kaufman, 2014-04-11 Creativity pervades human life It is the mark of individuality the vehicle of self expression and the engine of progress in every human endeavor It also raises a wealth of neglected and yet evocative philosophical questions What is the role of consciousness in the creative process How does the audience for a work of art influence its creation How can creativity emerge through childhood pretending Do great works of literature give us insight into human nature Can a computer program really be creative How do we define creativity in the first place Is it a virtue

What is the difference between creativity in science and art Can creativity be taught The new essays that comprise The Philosophy of Creativity take up these and other key questions and in doing so illustrate the value of interdisciplinary exchange Written by leading philosophers and psychologists involved in studying creativity the essays integrate philosophical insights with empirical research

Self-Aware Robots Junichi Takeno, 2022-04-19 This book focuses on the research and development in the field of self aware robots Its theme is artificial consciousness a field that covers both artificial intelligence and robotics and includes philosophy psychology the study of biological evolution physiology and medicine especially brain neuroscience and neuropsychiatry Building on the first edition Creation of a Conscious Robot Mirror Image Cognition and Self Awareness this new edition discusses artificial neural networks and functions of human consciousness It proposes a structure for a neural network with consciousness functions explains the construction of a conscious system and discusses the results of progressive research in designing and developing small robots with conscious systems capable of recognizing their own images in mirrors Emphasizing the contributions of conscious robots to society and their potential future impact the book also describes the robots that know the unknown Pavlovian robots and the development of a consciousness model possessing the well known multiple personality disorder
