Resnikoff,2012-12-06 The Illusion of Reality was conceived during my tenure as director of the newly established Division of Information Science and Technology at the National Science Foundation in 1979 1981 as a partial response to the need for a textbook for students both in and out of government that would provide a comprehensive view of information science as a fundamental constituent of other more established disciplines with a unity and coherence distinct from computer science cognitive science and library science although it is related to all of them Driven by the advances of information technology the perception of information science has progressed rapidly today it seems well understood that information processing biological organisms and information processing electronic machines have something basic in common that may subsume the theory of computation as well as fundamental parts of physics This book is primarily intended as a text for an advanced undergraduate or a graduate introduction to information science The multidisciplinary nature of the subject has naturally led to the inclusion of a considerable amount of background material in various fields The reader is likely to find the treatment relatively oversimplified in fields with which he is familiar and perhaps somewhat heavier sailing in less familiar waters The theme of common principles among seemingly unrelated applications provides the connective tissue for the diverse topics covered in the text and I hope justifies the variable level of presentation Some of the material appears here for the first time

**Photographic Metrics** Naval Photographic Interpretation Center (U.S.),1955      **Time, Space, and Chance** Jennifer Kathryn Bantz,2006      **Discrete Geometry and Symmetry** Marston D. E. Conder,Antoine Deza,Asia Ivić Weiss,2018-06-11

This book consists of contributions from experts presenting a fruitful interplay between different approaches to discrete geometry. Most of the chapters were collected at the conference Geometry and Symmetry in Veszprém Hungary from 29 June to 3 July 2015. The conference was dedicated to Károly Bezdek and Egon Schulte on the occasion of their 60th birthdays, acknowledging their highly regarded contributions in these fields. While the classical problems of discrete geometry have a strong connection to geometric analysis, coding theory, symmetry groups, and number theory, their connection to combinatorics and optimization has become of particular importance. The last decades have seen a revival of interest in discrete geometric structures and their symmetry. The rapid development of abstract polytope theory has resulted in a rich theory featuring an attractive interplay of methods and tools from discrete geometry, group theory, and geometry, combinatorial group theory, and hyperbolic geometry and topology. This book contains papers on new developments in these areas, including convex and abstract polytopes and their recent generalizations, tiling and packing, zonotopes, isoperimetric inequalities, and on the geometric and combinatorial aspects of linear optimization. The book is a valuable resource for researchers both junior and senior in the field of discrete geometry, combinatorics, or discrete optimization. Graduate students find state-of-the-art surveys and an open problem collection.

*History of Women Photographers* Naomi Rosenblum, 2010 The definitive text on women in photography, now in an affordable paperback edition.

**Photography and Literature** Eric Lambrecht, Luc Salu, 1992 Photography and Literature: An International Bibliography of Monographs covers the period 1839-1991. It is arranged alphabetically by author/photographer, with numerous cross-references to editors, compilers, illustrators, translators, etc. It lists some 3,900 titles in about twenty languages and includes books, exhibition catalogues, dissertations, and special issues of magazines.

**Image and Imagination** Sandra Malicote, 2010 The first in-depth interdisciplinary study of word and image in the Old French *chanson de geste*. *Image and Imagination: Picturing the Old French Epic* examines the fascinating relationship between illumination and epic narrative constructed by the medieval understanding of the imagination. The study focuses on the epic cycle known as the *geste of Saint Gille*, including *Aiol* and *Elie de Saint Gille*. The poems in manuscript were produced in the context of the opulent francophone Flemish courts of the mid to late thirteenth century. The manuscript known as BNF fr 25516 is richly illuminated, and the study includes the popular *Beuves de Hanstone*, forerunner of Shakespeare's *Hamlet*, and the poem *Robert le Diable*, later becoming Meyerbeer's celebrated opera. Concluding with the comparative study of BNF fr 24403's epic treatment of the only illuminated version of Chrétien de Troyes' first Arthurian work *Erec et Enide* and the Sancti Bertini version of *La Chevalerie Vivien*, the first dated collection of epics made for a prominent northern Bishop, this study introduces the hitherto little-explored world of medieval illumination and epic narrative poetics.

A Theory of Shape Identification Frédéric Cao,José-Luis Lisani,Jean-Michel Morel,Pablo Musé,Frédéric Sur,2008-08-17  
Recent years have seen dramatic progress in shape recognition algorithms applied to ever growing image databases They have been applied to image stitching stereo vision image mosaics solid object recognition and video or web image retrieval More fundamentally the ability of humans and animals to detect and recognize shapes is one of the enigmas of perception The book describes a complete method that starts from a query image and an image database and yields a list of the images in the database containing shapes present in the query image A false alarm number is associated to each detection Many experiments will show that familiar simple shapes or images can reliably be identified with false alarm numbers ranging from 10 5 to less than 10 300 Technically speaking there are two main issues The first is extracting invariant shape descriptors from digital images Indeed a shape can be seen from various angles and distances and in various lights
