Molecular Aspects of Alcohol and Nutrition Vinood B. Patel, 2015-11-06

Molecular Aspects of Alcohol and Nutrition is a valuable resource for nutrition researchers and nutritionists who study or treat alcohol related diseases. Experts from across the field of alcohol research explain how alcohol disrupts normal fat, carbohydrate and protein metabolic processes occurring in the liver as well as other parts of the body. The book discusses how this can lead to alcoholic liver disease (ALD) as well as contribute to the onset of Type 2 diabetes and the metabolic syndrome. It also explores how alcohol affects nutrient absorption in the gastrointestinal tract and can lead to anemia and reduced amounts of fat soluble vitamins. This book explores both the primary and secondary consequences of alcohol consumption. Chapters in the first section investigate the basic science of alcohol metabolism focusing on how alcohol and its toxic metabolites disrupt and impair normal nutrient regulation at the molecular level. Further chapters explore how alcohol affects many extra hepatic organs and tissues as well as the secondary consequences of alcohol consumption such as reduced levels of minerals like magnesium, calcium and trace elements like zinc. Offers a valuable resource for nutrition researchers and nutritionists who study alcohol related diseases and attempt to treat them through nutritional strategies. Explores how alcohol and its toxic metabolite acetaldehyde disrupt and impair normal macro and micro nutrient regulation at the molecular level. Investigates how alcohol affects and interferes with cell signaling, cell death pathways, calcium homeostasis leading to osteoporosis, oxygen balance as well as the pathophysiology of alcohol consumption and abuse.

Advances in Nutrition and Cancer Vincenzo Zappia, Salvatore Panico, Gian Luigi Russo, Alfredo Budillon, Fulvio Della Ragione, 2013-10-10

This book comprises proceedings from the Third International Conference on Advances in Nutrition and Cancer held in Naples in May 2012. This highly multidisciplinary meeting analyzed nutrition and cancer from different perspectives and on the basis of distinct and up to date experimental approaches. Knowledge on the relation between lifestyle, diet and cancer is explored in a number of contributions and the role of dietary intervention in cancer patients is discussed. Issues of vital interest to the research community such as epidemiological and experimental oncology, genetics, epigenetics and the mechanisms of action of natural compounds in the diet receive detailed consideration. A further key topic is the emerging molecular technologies, the omics, that can cast light on the interplay between nutrition and human malignancies. Chapters take the form of reviews that include sections presenting expert opinions.

Studies on Hepatic Disorders Emanuele Albano, Maurizio Parola, 2015-05-28 This volume examines the current state of free radical biology as it impacts on hepatic disorders. It takes a thorough look at the relationship of oxidative stress in acute and chronic disease and takes into account factors like redox biomarkers, antioxidant defense and protection, cell signaling, mutations, oxidative damage involving lipids, proteins and nucleic acids, membrane trafficking, inflammation, mitochondrial dysfunction, alterations in immunological function and toxicology and hypoxia. *Studies on Hepatic Disorders*, the latest volume in the *Oxidative Stress in Basic Research and Clinical Practice* series, provides a comprehensive look at liver topics. It is organized into four sections, each one

thoroughly covering its topic and consisting of chapters written by recognized field leaders Section One covers basic principles including redox signaling antioxidant defenses nitric oxide oxidative mechanisms in senescence and regeneration and the detection of oxidative stress Section Two explores Pathophysiology It ranges from cell damage to fibrogenic response as broken out in chapters on hepatocellular injury mitochondrial damage unfolded protein response and autophagy inflammation ischemia reperfusion injury and finally fibrogenesis Sections Three and Four cover specific diseases and cancer respectively Most of the chapters focus on diseases including acute failure alcoholic disease viral hepatitis iron overload autoimmune disease Wilson s disease and more while the chapters on cancer round out the book
