Food, Science, and Technology Richard E. Wallace, 1978 **Food Science** Norman N. Potter, 2013-04-17 Almost two decades have passed since the first edition of Food Science was published in 1968 Previous editions have been widely circulated in the United States and abroad and have been accepted as a textbook in many colleges and universities The book also has been translated into Japanese and Spanish This response has encouraged me to adhere to prior objectives in preparing this fourth edition The book continues to be aimed primarily at those with no previous instruction in food science Its purpose is to introduce and to survey the complex and fascinating interrelationships between the properties of food materials and the changing methods of handling and manufacturing them into an almost unlimited number of useful products The book especially addresses the needs for insight and appreciation of the broad scope of food science by students considering this field as a profession as well as those by professionals in allied fields that service or interface with the food industry in ever increasing ways The literature of food science and food technology has rapidly matured from earlier articles to books to encyclopedias Where technological capabilities once were limited rapid advances in many fields continually raise questions on the responsible management of technology and its environmental social and economic consequences Changes in emphasis have been many Affluent countries have become more concerned with the health effects of nutrient excesses than with deficiencies while hungry nations continue to suffer shortages **Physical Properties of Foods and Food Processing Systems** M J Lewis, 1990-01-01 This book is an invaluable introduction to the physical properties of foods and the physics involved in food processing It provides descriptions and data that are needed for selecting the most appropriate equipment in food technology and for making food processing calculations Handbook of Fruit Science and Technology D. K. Salunkhe, S.S. Kadam, 1995-08-18 This work offers comprehensive current coverage of preharvest and postharvest handling and production of fruits grown in tropical subtropical and temperate regions throughout the world It discusses over 60 major and minor crops and details developments in fruit handling and disease control storage practices packaging for fruit protection sizing equipment conveyors package fillers refrigeration methods and more National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1966 First multi year cumulation covers six years 1965-70 *Food Antioxidants* D.L. Cereals in Breadmaking Ann-Charlotte Eliasson, Larsson Kare, 2018-05-08 This reference text describes the breadmaking process at the molecular level based on surface and colloidal science and introducing colloidal science with a minimum of theory Reviewing the current molecular and colloidal knowledge of the chain from wheat grain to bread the book discusses the structure of the dough how a foam is formed during fermentation and how starch gelatinization induces the formation of an open pore network such as the bread crumb covers new results on the gluten structure in bulk and at interfaces as well as on phase separation in the dough presents a complete model of all structural transitions from dough mixing to the formation of a bread details the physicochemical properties of proteins lipids and carbohydrates in wheat and other cereals and considers their modes of interaction and explores recent progress in the shape of biomolecular assemblies derived from forces and curvature at interfaces The text provides nearly 850 citations from the reference literature

Water Activity: Influences on Food Quality Louis B. Rockland, George F. Stewart, 2013-10-22 Water Activity Influences on Food Quality is a collection of papers presented at the 1978 International Symposium by the same title held in Osaka Japan This book is a treatise on the influence of bound and free water on the quality and stability of foods and other natural products This book is organized into seven sections encompassing 33 chapters The first sections deal with the characterization of moisture sorption isotherms based on both theoretical and applied considerations as well as the relationship of bound water to the physical and chemical properties of natural products including foods The succeeding sections consider the structure of water and the influence of solutes and solute mobility on water activity and the influence of water and water activity on the structural and functional characteristics of proteins carbohydrates and proteins Other sections explore the influence of water activity and temperature on the rates of several important chemical reactions such as lipid oxidation vitamin decomposition browning and other reactions which affect the

chemical physical and nutritional properties of food These sections also discuss the influence of water activity on food processing and storage practices from both theoretical and applied viewpoints specifically the application of water activity principals to the processing and preservation of leafy vegetables cheese dried fish and other products The final section is devoted to the influences of water activity on the behavior of food related microorganisms This section emphasizes the role of solvents in controlling water activity and the related survival of certain microorganisms This book will prove useful to food scientists and researchers
