Evidence-Based Health Care and Public Health Muir Gray, 2014-09-05 A guide to evidence based decision making for healthcare medical and nurse managers New edition of a highly praised and successful book in one of the hottest areas of medicine Covers the vital areas for healthcare managers finding and appraising evidence and developing the capacity of individuals and organisations to use evidence Pressure on healthcare services is growing this book will be indispensable for managers making difficult decisions about the allocation of scarce resources Exceptionally well written highly praised by the Journal of the American Medical Association and the British Medical Journal More on managerial decision making and managerial options in the face of financial pressure on resources More focus on how to get better outcomes how to improve quality rather than just how to measure quality Updating throughout

Public and Community Health Nursing Practice Demetrius James Porche, 2004 Developed as an advanced text for students in public and community health nursing this book presents a summary of the core functions of population based practice emphasizing evidence based research Porche nursing Nursing Research and Evaluation Louisiana State University Health Sciences Center

Medical Devices Christa Altenstetter, 2017-09-08 Medical devices are the bread and butter from which health care and

clinical research are derived Such devices are used for patient care genetic testing clinical trials and experimental clinical investigations Without medical devices there is no clinical research or patient care Without life adjusting devices there are no medical procedures or surgery Without life saving and life maintaining devices there is no improvement in well being and quality of life Without innovative medical devices and experimentation there can be no medical progress or patient safety Medical devices and medical technology are used to create or support many different products and medical surgical procedures This volume on the regulation of medical devices in the European Union with a focus on France tackles a topic of interdisciplinary interest and significance for policymakers in countries around the globe The EU regulatory regime is one of three global regional regimes and medical products manufactured in EU countries are sold worldwide As countries confront an aging population on a global scale with associated increases in chronic diseases physical handicaps and multi morbidity there will inevitably be an increase in the demand for health services and concomitantly the use of medical devices in medical and surgical procedures This will be the case regardless of whether services are delivered in hospitals doctors offices or at home The associated risks of a particular device will be the same whatever the country of origin for the device or where the need occurs Revolutionary medical advances increase diagnostic capabilities but they increase the potential of harm and risks to patients Medical technologies and devices are used ethically most of the time yet they have the potential for unethical use when scientific medicine is elevated over human life and death Assumptions that are taken for granted can be dangerous to a patient s health That is why our understanding of appropriate and effective regulation of medical devices is significant to all people on all continents
