## **Principles Of Artificial Intelligence:**

**Principles of Artificial Intelligence** Nils J. Nilsson, 1982-05-01 Previous treatments of Artificial Intelligence AI divide the subject into its major areas of application namely natural language processing automatic programming robotics machine vision automatic theorem proving intelligent data retrieval systems etc The major difficulty with this approach is that these application areas are now so extensive that each could at best be only superficially treated in a book of this length Instead I have attempted here to describe fundamental AI ideas that underlie many of these applications My organization of these ideas is not then based on the subject matter of their application but is instead based on general computational concepts involving the kinds of data structures used the types of operations performed on these data structures and the properties of control strategies used by AI systems I stress in particular the important roles played in AI by generalized production systems and the predicate calculus The notes on which the book is based evolved in courses and seminars at Stanford University and at the University of Massachusetts at Amherst Although certain topics treated in my previous book Problem solving Methods in Artificial Intelligence are covered here as well this book contains many additional topics such as rule based systems robot problem solving systems and structured object representations

**The Ethics of Artificial Intelligence** Luciano Floridi, 2023 The Ethics of Artificial Intelligence develops the theses that AI is an unprecedented divorce between agency and intelligence and on this basis that AI as a new form of agency can be harnessed ethically and unethically Luciano Floridi argues in favour of a marriage between the Green of environmentalism and the Blue of our digital technologies

*AI 2003: Advances in Artificial Intelligence* Tamas D. Gedeon, Lance C.C. Fung, 2003-12-01 Consider the problem of a robot algorithm learning mechanism moving along the real line attempting to locate a particular point To assist the mechanism we assume that it can communicate with an Environment Oracle which guides it with information regarding the direction in which it should go If the Environment is deterministic the problem is the Deterministic Point location Problem which has been studied rather thoroughly 1 In its pioneering version 1 the problem was presented in the setting that the Environment could charge the robot a cost which was proportional to the distance it was from the point sought for The question of having multiple communicating robots locate a point on the line has also been studied 1 2 In the stochastic version of this problem we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic i e possibly erroneous instead of deterministic responses from the environment Thus when it should really be moving to the right it may be advised to move to the left and vice versa Apart from the problem being of importance in its own right the stochastic point location problem also has potential applications involving optimization problems In many optimization solutions for example in image processing pattern recognition and neural computing 5 9 11 12 14 16 19 the algorithm works its way from its current solution to the optimal solution based on information that it currently has A crucial question is one of determining the parameter which the optimization algorithm should use
