Principles of Childhood Language Disabilities John V. Irwin, 1972

Principles of childhood language disabilities, 1972

Handbook of Child Language Disorders Richard G. Schwartz, 2017-02-03 The acquisition of language is one of the most remarkable human achievements. When language acquisition fails to occur as expected, the impact can be far reaching, affecting all aspects of the child's life and the child's family. Thus, research into the nature, causes, and remediation of children's language disorders provides important insights into the nature of language acquisition and its underlying bases and leads to innovative clinical approaches to these disorders. This second edition of the *Handbook of Child Language Disorders* brings together a distinguished group of clinical and academic researchers who present novel perspectives on researching the nature of language disorders in children. The handbook is divided into five sections: Typology, Bases, Language Contexts, Deficits, Assessment, and Intervention, and Research Methods. Topics addressed include autism-specific language impairment, dyslexia, hearing impairment, and genetic syndromes and their deficits, along with introductions to genetics, speech production and perception, neurobiology, linguistics, cognitive science, and research methods. With its global context, this handbook also includes studies concerning children acquiring more than one language and variations within and across languages. Thoroughly revised, this edition offers state-of-the-art information in child language disorders together in a single volume for advanced undergraduate students and graduate students. It will also serve as a valuable resource for researchers and practitioners in speech language pathology, audiology, special education, and neuropsychology, as well as for individuals interested in any aspect of language acquisition and its disorders.

Child Language Disability: Semantic and pragmatic difficulties Kay Mogford-Bevan, Jane Sadler, 1991-01-01 Rising recognition of semantic and pragmatic disabilities in children with specific language impairment has created a demand for a satisfactory framework and suitable methods for assessment and remediation. Work in tackling these problems is at an early stage. This book reports on progress in research and practice in a form accessible to professionals from a variety of backgrounds.

Language Development and Disorders W. Yule, M. Rutter, 1987 Communication disabilities are common, although their precise nature and degree of severity vary greatly among individuals. They are among the most handicapping of disabilities because they isolate a person and, in so doing, restrict social, educational, and occupational opportunities. One of the purposes of this book was to bring together theoretical, practical, and clinical knowledge from several disciplines that bear on language and communication into some reasonably accessible form. The intent is to provide a broad and multi-faceted view of language development and language disorders. Thus, contributions from education, linguistics, psychology, pediatrics, psychiatry, neurology, neuropsychology, and speech therapy are included. They describe our current knowledge of language development, suggest classifications for language pathology, outline what is known of the epidemiology of language difficulties, consider assessment and therapy, alternative communication systems, and the impact of the new technology on communication aids. The variety of

perspectives that it provides will make it particularly useful to the range of specialists who are concerned with the development of communication skills and language disorders

Learning Disability Subtyping

Stephen R. Hooper, W. Grant Willis, 2013-11-11 The publication of this very important volume comes at a timely juncture in the history of learning

disabilities The focus of this volume is on developing a multidisciplinary understanding of the complexities of the research on learning disabilities and its various sUBtypes It also will serve as an important compendium of the subtyping literature particularly with respect to pertinent issues of nosology specific sUBtyping models neuro psychological diagnosis and treatment As the authors so correctly suggest the differential diagnosis of learning disabilities subtypes is a critical first step in developing theoretically sound programs of psychoeducational intervention Clearly one must have some idea about the general abilities of a child before realistic expectations can be charted Also how can one plan a program of intervention without some knowledge of the deficient components of achievement within a do main Does it not make both conceptual and practical sense to identify an individual s relative strengths and weaknesses so that abilities or strengths can be utilized to optimize functioning in areas of deficit Although these all sound like reasonable precursors to assisting individuals in need of academic assistance there are those who would argue otherwise Impor tantly however the Director of the National Institutes of Health in a recent report to Congress advocates exactly what this volume proposes Indeed there are important needs to be addressed and the literature reviewed herein strongly supports the conclusions drawn by these authors
