The Johns Hopkins University School of Medicine Curriculum for the Twenty-first Century Catherine D. De Angelis, 2000-03-27 Our basic philosophy of medical education must be directed not toward creating a neurosurgeon a family practitioner a cardiologist or a general pediatrician but toward creating an undifferentiated stem cell physician who is so well prepared that he or she is fully capable of taking any career path after medical school Every indication is that our goal is being met The new curriculum is preparing students for the demands and responsibilities of a new era of medicine science and medical arts from the Foreword by Michael M E Johns M D The curriculum taught in many U S medical schools today has been

altered little since 1910 Now spurred in part by the recent sweeping changes in health care delivery medical schools are re evaluating their curricula The goal is to develop a program of medical education that not only reflects the latest scientific advances but also prepares physicians in the fields and specialties society now needs This book provides an extensive description of the process and outcome of developing a completely new curriculum at the Johns Hopkins University School of Medicine The book is organized around the subjects and courses taught basic sciences physician and society medical informatics and clinical medicine Chapters also consider evaluation and reform of the curriculum The contributors Johns Hopkins faculty members who participated in developing the components of the curriculum discuss differences between the old and new courses and programs reasons for the changes and the process used to plan and implement them Throughout the material is presented in a way that permits easy generalization and adaptation to other medical schools Contributors Catherine D De Angelis M D Diane M Becker Sc D Gert H Brieger M D Ph D Leon Gordis M D H Franklin Herlong M D K Joseph Hurt Michael M E Johns M D Langford Kidd M D F R C P Michael J Klag M D Harold P Lehmann M D Ph D Nancy Ryan Lowitt M D Ed M Lucy A Mead Sc M Thomas D Pollard M D Henry M Seidel M D John H Shatzer Jr Ph D Patricia A Thomas M D F A C P Victor Velculescu Charles M Wiener M D *Scientific background to medicine 2* , **A Practical Guide to Drug Development in Academia** Daria Mochly-Rosen, Kevin Grimes, 2023-11-06 A lot of hard won knowledge is laid out here in a brief but informative way Every topic is well referenced with citations from both the primary literature and relevant resources from the internet Review of first edition from Nature Chemical Biology Written by the founders of the SPARK program at Stanford University this book is a practical guide designed for professors students and clinicians at academic research institutions who are interested in learning more about the drug development process and how to start transforming their basic research discoveries into novel drugs Often many potentially transformative basic science discoveries are not pursued because they are deemed too early to attract industry interest This comprehensive book lays out simple relatively cost effective things that academic researchers can do to advance their findings to the point that they can be tested in the clinic or attract more industry interest Each chapter broadly discusses an important topic in drug development from discovery optimization and preclinical studies through clinical trial design regulatory issues and marketing assessments After the practical overview provided here the reader is encouraged to consult more detailed texts on specific topics of interest The SPARK model has been adopted in over 60 institutions on six continents and the program has been honored with multiple awards including the 2020 Xconomy Award for Ecosystem Development the 2020 Cures Within Reach Award for Patient Impact Research and the 2022 California Life Sciences Pantheon Award for Academia Non Profits Research The new edition updates every chapter with the latest developments since the 2014 publication of the first edition
