Principles Of Hydrology:

Principles of Hydrology R. C. Ward, Mark Robinson, 2000 This book takes a non mathematical look at the principles and processes of hydrology Now in its fourth edition this well established book preserves the essential structure clarity and style which have ensured its continued international popularity over more than three decades However the book has been revised and fully updated to take into account new research and developments in the subject and the changing role of hydrology in the modern world The thematic treatment of the main phases of the hydrological cycle i e precipitation interception evaporation subsurface water and stream flow has been retained together with the chapter on water quality A final synthesising chapter has been reinstated by popular demand together with a broader spectrum of case studies and examples A selection of problems and exercises has also been included at the end of each chapter Applied Principles of Hydrology John C. Manning, 2016-11-03 Less than 1% of the Earth's water is available for human use the average family uses 400 gallons of water daily and expected population growth means an increase in water use The study of hydrology how water behaves as it moves through the water cycle is vital to reducing strains on our water supply and infrastructure Written for those who want to understand hydrologic principles without a background in mathematics Manning's basic water science text begins with the physical and chemical attributes that make water a unique substance and proceeds with a step by step discussion of the water cycle Scientific principles are illustrated by real world examples while investigations sections offer practical suggestions for making measurements and or interpretations of hydrological variables in the local environment and for applying principles discussed in the text This well structured reader friendly text benefits not only students in elementary hydrology courses but also those studying broader areas of natural resources ecology geography and urban planning
