**Principles of Islamic Psychology** Farid Younos,2017-05-09 Psychology is the study of mind and this is exactly why the Quran put a great emphasis between the relationship of man and his Creator and the role faith plays intellectually and spiritually in our lives The Quran is a book of wisdom and it includes all aspects of human life Religion as a matter of fact is an intellectual property that cannot be seen So the mind cannot be seen Human beings are curious creatures This curiosity elaborated in the story of Abraham when he wanted to find the truth for himself Finding the truth is a principle of science and research Islamic psychology is based on three principles namely theo ethics socio ethics and psyco ethics which discusses human relations from a psychological point of view It is the mind that relates to all aspects of life Therefore Islamic psychology deals with all spheres that originate from God alone For that ego or self plays a major role and makes mankind responsible for all his actions Since Islam is a religion of unity then all processes of mind interrelate to not only self but also to God and society Therefore like any other field of knowledge it is hard to separate psychology or the study of mind from other life principles As a matter of fact it is the mind that regulates other affairs being good or bad Islamic psychology emphasizes on making humans responsible for their inner soul activities which lead either to felicity or destruction Since religion is an intellectual property then the study of mind is also a spiritual and intellectually property

[Basic Principles of Islam](#) Shareef Ahmad,1998 *Financial and Accounting Principles in Islamic Finance* Samir Alamad,2019-05-10 This book provides an original account detailing the origins and components of a faith based accounting system that was founded around 629 CE By examining the historical development that the accounting systems underwent within the context of faith based rules and values the book explains what is meant by the term

faith based accounting together with a discussion of its characteristics in relation to various product structures and the underlying Islamic finance principles. It provides important theoretical and practical contributions by explaining accounting as a value based science rather than a value free object or abstract. This book explores the way in which religious rules act as a directive for accounting and auditing practices in IFIs. Through which the concept of money and digital currency within the theory of money and how it is enacted in a faith based context amid differences of opinions among its actors is examined. This is an important foundation to explain Islamic accounting and includes how this outcome would shape the faith based view regarding the new phenomenon of digital currency. DC. Also featured is the concept of paper money within the theory of money and how it is enacted in a faith based legal framework by identifying two core concepts of today's Fiat money as being a single genus or multi genera money. This book is not merely an academic work nor is it a pure practitioner guide rather it is a robust work that combines both. It marries rigorous academic research and theories with practical industry experiences. The book provides a clear and concise guide to accounting in Islamic economics and finance and how Islamic financial institutions could meet the applicable faith based rules in their accounting practices.
