Handbook of Research Methods in Human Memory Hajime Otani,Bennett L. Schwartz,2018-10-09 The Handbook of Research Methods in Human Memory presents a collection of chapters on methodology used by researchers in

investigating human memory Understanding the basic cognitive function of human memory is critical in a wide variety of fields such as clinical psychology developmental psychology education neuroscience and gerontology and studying memory has become particularly urgent in recent years due to the prominence of a number of neurodegenerative diseases such as Alzheimer's However choosing the most appropriate method of research is a daunting task for most scholars This book explores the methods that are currently available in various areas of human memory research and serves as a reference manual to help guide readers own research Each chapter is written by prominent researchers and features cutting edge research on human memory and cognition with topics ranging from basic memory processes to cognitive neuroscience to further applications The focus here is not on the what but the how how research is best conducted on human memory

The Foundations of Remembering James S. Nairne, 2011-12-06 The Foundations of Remembering presents a collection of essays written by top memory scholars in honor of Henry L. Roediger III The chapters were originally delivered as part of the Roddyfest conference held in March 2005 to celebrate Purdue University's awarding of an honorary doctor of letters to Roediger in recognition of his many contributions to the field of psychology Authors were given a simple charge choose your own topic but place your work in historical context Roediger is fascinated by the intellectual lineage of ideas so addressing historical foundations seemed a fitting tribute The Chapters contained in this volume help to establish the foundations of remembering circa the first decade of the 21st century as perceived by some of the leading memory researchers in the world Not surprisingly each of the chapters touches on Roediger's research as well largely because his work has helped to define and clarify many topics of interest to the memory field The Foundations of Remembering is intended for a wide audience students scholars and anyone interested in exploring the historical and conceptual roots of modern memory theory

Learning and Memory Robert W. Howard, 1995-01-24 This book surveys the entire field of learning and memory It describes the major approaches to its study and looks at basic assumptions and philosophical underpinnings Howard integrates work from quite different perspectives into a single framework and describes peripheral areas not usually mentioned in mainstream books such as prenatal learning constraints on knowledge nonconnectionist machine learning intelligence and learning and skills learning He gives the reader a broad knowledge of what the field is all about what its parts are and how they interrelate its major principles and key applications The primary contribution of this work is the integration of current thinking about learning with the literature and research on memory

Theories of Memory Alan F. Collins, Martin A. Conway, 1993 The main emphasis throughout this collection is on theoretical issues and how they relate to existing empirical work

Human Memory and Amnesia (PLE: Memory) Laird Cermak, 2014-05-09 Originally published in 1982 this book brings together two areas of research previously studied in parallel with little interaction particularly in the US normal memory processing and the amnesic syndrome When trying to document the relationship between the two it became apparent that there was much crossover and duplication of effort in a number of areas whether long term memory and short term memory truly represent independent storage systems or are simply points on a continuum trying to determine the primary locus of variables influencing the rate at which information is lost during retention whether episodic memory and semantic memory represent two different storage systems or are simply artifacts produced by different kinds of query to a single memory system and finally whether visual and verbal memory are independent It was written following a meeting in 1979 by a small group of investigators brought together to explore this commonality and to share data and theory thus beginning the promise of a bright future of interdisciplinary interaction in memory research
