Principles of Modern Technology Adrian C. Melissinos, Adrian Constantin Melissinos, 1990-09-28 The late twentieth century is undoubtedly the age of technology Each technological development leads to more sophisticated devices and further scientific advances Because of the pace of change it is difficult to obtain a broad overview of the way fundamental science is linked to its everyday applications Principles of Modern Technology describes the physical principles on which modern technology is based Four primary areas have been singled out computers and microelectronics communications nuclear energy and space flight Each topic is treated in a way that gives the reader an insight into the underlying physics which makes the technology possible as well as the orders of magnitude involved Based on a course taught at the University of Rochester the book will be useful both as a textbook for courses in applied physics and engineering and as a reference book It will be of interest to undergraduates taking introductory physics courses and anyone interested in modern technology

Modern Technology for Sustainable Agriculture Arvind Kumar, V. K. Singh, Yogeshwar Singh, Susheel Kumar Singh, Pavan Kumar, 2025-08-02 Modern technology for sustainable agriculture is based primarily on three platforms namely science innovation and spatial technologies These are considered as the three pioneer pillars of nation building Spatial technologies play a vital role in improving soil quality reducing the waste of water during irrigation and sharing agricultural information with farmers With the help of terrestrial aquatic and aerial sensors satellites and surveillance equipment a large volume of geo spatial data from diverse sources is collected analyzed and utilized for smart farming and shielding of crops During last five decades agricultural research and extension has focused on the development of higher productivity of crop varieties increased fertilizer use and other production technologies These have enabled the farmers to grow more food but at the same time it over exploited the resources and resulted in decreasing farm productivity and profitability To tackle such problems harmonious use of inputs through integration of various land based enterprises and their compounded responses needs further attention to make the agriculture more productive profitable and sustainable Many technologies have been identified to support sustainable use of resources and facilities including Natural Resource Management NRM Resource Conservation Technologies RCTs Integrated Farming System IFS Integrated Crop Management ICM Integrated Nutrient Management INM protected cultivation practices secondary agricultural practices and post harvest technologies
