Phonetics Eugeniusz Cyran, 2014-05-26 For decades the voicing system of Polish has been at the center of a heated theoretical debate concerning laryngeal phonology as it features a number of phenomena that constitute the core of this debate such as Final Obstruent Devoicing Regressive Voice Assimilation and Progressive Voice Assimilation As research into laryngeal phonology progresses on various fronts it becomes more obvious that a large portion of the phenomena in question have phonetic or implementational conditioning thus limiting the role of phonology even further The model presented here is one in which phonology phonetic interpretation and phonetics find their respective homes Paradoxically by separating these three levels of description we wish to integrate the disparate threads of modern research of sound patterns into one sound system

Phonology in the Twentieth Century Stephen R. Anderson, 2021 The original 1985 edition of this work attempted to cover the main lines of development of phonological theory from the end of the 19th century through the early 1980s Much work of importance both theoretical and historiographic has appeared in subsequent years and the present edition tries to bring the story up to the end of the 20th century as the title promised This has involved an overall editing of the text in the process correcting some errors of fact and interpretation as well as the addition of new material and many new references

Phonetics and Phonology of Tense and Lax Obstruents in German Michael Jessen, 1999-01-15 Knowing that the so called voiced and voiceless stops in languages like English and German do not always literally differ in voicing several linguists among them Roman Jakobson have proposed that dichotomies such as fortis lenis or tense lax might be more suitable to capture the invariant phonetic core of this distinction Later it became the dominant view that voice onset time or laryngeal features are more reasonable alternatives However based on a number of facts and arguments from current phonetics and phonology this book claims that the Jakobsonian feature tense was rejected prematurely Among the theoretical aspects addressed it is argued that an acoustic definition of distinctive features best captures the functional aspects of speech communication while it is also discussed how the conclusions are relevant for formal accounts such as feature geometry The invariant of tense is proposed to be durational and its basic correlate is proposed to be aspiration duration It is shown that tense and voice differ in their invariant properties and basic correlates but that they share a number of other correlates including F0 onset and closure duration In their stop systems languages constitute a typology between the selection of voice and tense but in their fricative systems languages universally tend towards a syncretism involving voicing and tenseness together Though the proposals made here are intended to have general validity the emphasis is on German As part of this focus an acoustic study and a transillumination study of the realization of p t k f s vs b d g v z in German are presented
