

Rheumatic Diseases

Rheumatoid arthritis (chronic polyarthritis)

Rheumatoid arthritis is a chronic inflammatory disease that affects the joints. It is characterized by synovial inflammation, which leads to the formation of pannus, a thick layer of inflamed tissue that grows into the joint space. This process causes joint swelling, pain, and eventually joint destruction. The disease is more common in women than in men and typically begins between the ages of 30 and 50. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Ankylosing spondylitis

Ankylosing spondylitis is a chronic inflammatory disease that affects the spine and sacroiliac joints. It is characterized by the formation of bony bridges between the vertebrae, which leads to a rigid, hunched posture. The disease is more common in men than in women and typically begins between the ages of 20 and 30. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Typical posture after many years of suffering from ankylosing spondylitis. The mobility of the spine is seriously impaired or even completely eliminated.

Self-healing rheumatic diseases

Rheumatic diseases are a group of conditions that affect the joints and other parts of the body. They are characterized by inflammation and pain. Some of these diseases are self-healing, meaning they resolve on their own without the need for long-term treatment. Examples include acute rheumatic fever and erythema nodosum.

Synovitis

Synovitis is a condition characterized by inflammation of the synovial membrane, which lines the joints. It is often a precursor to more serious joint diseases. The inflammation leads to the production of excess synovial fluid, which causes joint swelling and pain.

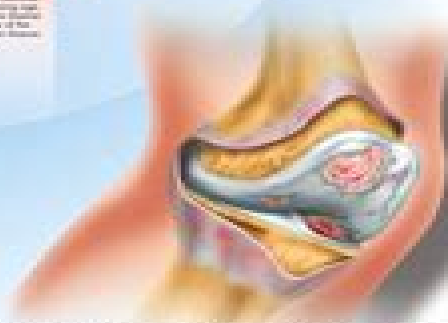

- Inflammation of the synovial membrane
- Excess production of synovial fluid
- Joint swelling and pain
- Possible progression to chronic arthritis
- Common in the hands and feet
- Often associated with trauma or infection
- Can be treated with anti-inflammatory drugs
- Usually resolves within a few weeks
- May be a sign of a more serious condition
- Requires medical attention if persistent

According to the World Health Organization (WHO), rheumatic diseases represent the largest burden of disability. They are a major cause of chronic pain and disability. The most common rheumatic diseases are osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis.

Degenerative joint diseases (osteoarthritis)

Degenerative joint diseases, also known as osteoarthritis, are a group of conditions that affect the joints. They are characterized by the breakdown of the articular cartilage, which leads to joint pain and stiffness. The disease is more common in older people and typically begins between the ages of 40 and 50. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Knee joint with signs of arthritis. The damage to the joint cartilage of the femur can be clearly seen. The joint space is narrowed and the fibrous synovitis has developed at the edges of the bone ("fraying").

Joint inflammation accompanying gonorrhea

Gonorrhea is a bacterial infection that can affect the joints. It is characterized by joint pain and swelling. The inflammation is caused by the bacteria entering the joint space through the bloodstream. The disease is more common in men than in women and typically begins between the ages of 20 and 30. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Degeneration of the ear canal crystals in the ear infection.

Redness and swelling of the foot, characteristic of joint inflammation.

The basal joint of the big toe is frequently affected by acute gonorrhea.

Rheumatic diseases with chronic consequences

Rheumatic diseases can have long-term consequences that affect the joints and other parts of the body. These consequences include joint deformities, chronic pain, and disability. The disease is more common in older people and typically begins between the ages of 40 and 50. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Stenosis with osteoarthritis. The greater of loss of mobility from the hip to the knee is illustrated.

Acute inflammation in children and adolescents (juvenile arthritis)

Juvenile arthritis is a group of conditions that affect the joints in children and adolescents. It is characterized by joint pain and swelling. The disease is more common in girls than in boys and typically begins between the ages of 10 and 15. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Inflammatory diseases of the connective tissue

Inflammatory diseases of the connective tissue are a group of conditions that affect the joints and other parts of the body. They are characterized by inflammation and pain. The disease is more common in older people and typically begins between the ages of 40 and 50. It is a systemic disease, meaning it can affect other parts of the body besides the joints.

Infectious joint inflammation

Infectious joint inflammation is a condition caused by a bacterial infection of the joints. It is characterized by joint pain and swelling. The disease is more common in older people and typically begins between the ages of 40 and 50. It is a systemic disease, meaning it can affect other parts of the body besides the joints.
