Chemistry and Geochemistry of Hydraulic Fracturing K. S. Birdi, 2016-10-14 Unique in focus Surface Chemistry and Geochemistry of Hydraulic Fracturing examines the surface chemistry and phenomena in the hydrofracking process Under great scrutiny as of late the physico chemical properties of hydrofracking are fully detailed and explained Topics include the adsorption desorption of gas on the shale reservoir surface and relevant waste water treatment dependent on various surface chemistry principles The aim of this book is to help engineers and research scientists recognize the basic surface chemistry principles related to this subject Written by a long time expert in the field this book presents an unbiased account of the hard science and engineering involved in a resource that is gaining growing attention within the community *Encyclopedia of Surface and Colloid Science* P. Somasundaran, 2006

Surface Chemistry of Froth Flotation S. Ramachandra Rao, 2013-06-29 The technology of froth flotation invented in the early 20 century was first used for the concentration of sulfide minerals Since then it has been applied for the processing of many nonsulfide ores as well including oxides carbonates silicates soluble minerals like halite and sylvite and energy minerals like coal and bitumen In recent years it has been used for several nonmineral applications such as waste water treatment deinking of paper for recycling and resource recovery from industrial wastes the technology continues to grow with new applications reported every year Flotation is based on chemical phenomena occurring at the interfaces solid water and air water Surface Chemistry principles have played a significant role in the development of flotation technology Knowledge of aqueous solution chemistry and electrochemistry has added to our understanding of the reactions in flotation systems Professor Jan Leja's book has well served researchers and students as they tried to understand the chemistry of flotation and it is a significant contribution to the advancement of knowledge However since the book was first published new research techniques and ever growing information have made an update necessary The revised edition compiled by Dr S R Rao has brought together fundamental aspects of the chemistry of flotation and how they apply to practical systems It should serve all who are working in the area of flotation and interested in exploring new applications of flotation technology

**Surface Chemistry of Silicon** Yosuke Kanai, 2006

**Surface Analysis Methods in Materials Science** D.J. O'Connor, Brett A. Sexton, Roger S.C. Smart, 2013-06-29 The success of the first edition of this broad appeal book prompted the preparation of an updated and expanded second edition The field of surface analysis is constantly changing as it answers the need to provide more specific and more detailed information about surface composition and structure in advanced materials science applications The content of the second edition meets that need by including new techniques and expanded applications Newcastle John O Connor Clayton Brett Sexton Adelaide Roger Smart January 2003 Preface to the First Edition The idea for this book stemmed from a remark by Philip Jennings of Murdoch University in a discussion session following a regular meeting of the Australian Surface Science group He observed that a text on surface analysis and applications to materials suitable for final year undergraduate and postgraduate science students was not currently available Furthermore the members of the Australian Surface Science group had the research

experience and range of coverage of surface analytical techniques and applications to provide a text for this purpose A list of techniques and applications to be included was agreed at that meeting The intended readership of the book has been broadened since the early discussions particularly to encompass industrial users but there has been no significant alteration in content **Principles of Plasma Discharges and Materials Processing** Michael A. Lieberman, Alan J.

Lichtenberg, 2005-04-08 A Thorough Update of the Industry Classic on Principles of Plasma Processing The first edition of Principles of Plasma Discharges and Materials Processing published over a decade ago was lauded for its complete treatment of both basic plasma physics and industrial plasma processing quickly becoming the primary reference for students and professionals The Second Edition has been carefully updated and revised to reflect recent developments in the field and to further clarify the presentation of basic principles Along with in depth coverage of the fundamentals of plasma physics and chemistry the authors apply basic theory to plasma discharges including calculations of plasma parameters and the scaling of plasma parameters with control parameters New and expanded topics include Updated cross sections Diffusion and diffusion solutions Generalized Bohm criteria Expanded treatment of dc sheaths Langmuir probes in time varying fields

Electronegative discharges Pulsed power discharges Dual frequency discharges High density rf sheaths and ion energy distributions Hysteresis and instabilities Helicon discharges Hollow cathode discharges Ionized physical vapor deposition Differential substrate charging With new chapters on dusty plasmas and the kinetic theory of discharges graduate students and researchers in the field of plasma processing should find this new edition more valuable than ever **Physics of**

**Introduction to Applied Colloid and Surface Chemistry** Georgios M. Kontogeorgis, Soren Kiil, 2016-03-28 Colloid and Surface Chemistry is a subject of immense importance and implications both to our everyday life and numerous industrial sectors ranging from coatings and materials to medicine and biotechnology How do detergents really clean Why can't we just use water Why is milk milky Why do we use eggs so often for making sauces Can we deliver drugs in better and controlled ways Coating industries wish to manufacture improved coatings e.g. for providing corrosion resistance which are also environmentally friendly i.e. less based on organic solvents and if possible exclusively on water Food companies want to develop healthy tasty but also long lasting food products which appeal to the environmental authorities and the consumer Detergent and enzyme companies are working to develop improved formulations which clean more persistent stains at lower temperatures and amounts to the benefit of both the environment and our pocket Cosmetics is also big business Creams lotions and other personal care products are really just complex emulsions All of the above can be explained by the principles and methods of colloid and surface chemistry A course on this topic is truly valuable to chemists chemical engineers biologists material and food scientists and many more
