Priorities In Biomedical Ethics:

Priorities in Biomedical Ethics James F. Childress, 1981 Case studies raise questions about patients rights advanced life prolonging measures human subjects in medical research and the allocation of health care resources The Oxford Handbook of Bioethics Bonnie Steinbock, 2007-02-16 Bonnie Steinbock presents The Oxford Handbook of Bioethics an authoritative state of the art guide to current issues in bioethics Thirty four contributors reflect the interdisciplinarity that is characteristic of bioethics and its increasingly international character Thirty topics are covered in original essays written by some of the world's leading figures in the field as well as by some newer up and comers The essays address both perennial issues such as the methodology of bioethics autonomy justice death and moral status and newer issues such as biobanking stem cell research cloning pharmacogenomics and bioterrorism Other topics concern mental illness and moral agency the rule of double effect justice and the elderly the definition of death organ transplantation feminist approaches to commodification of the body life extension advance directives physician assisted death abortion genetic research population screening enhancement research ethics and the implications of public and global health for bioethics Anyone who wants to know how the central debates in bioethics have developed in recent years and where the debates are going will want to consult this book It will be an invaluable resource not only for scholars and graduate students in bioethics but also for those in philosophy medicine law theology social science public policy and public health who wish to keep abreast of developments in bioethics Bioethics Around the Globe Catherine Myser, 2011-06-01 Contemporary bioethics now roughly 40 years old as a discipline originated in the United States with a primarily Anglo American cultural ethos It continues to be professionalized and institutionalized as a maturing discipline at the intersections of philosophy medicine law social sciences and humanities Increasingly bioethics along with its foundational values concepts and principals has been exported to other countries not only in the developed West but also in developing and or Eastern countries Bioethics thus continues to undergo intriguing transformations as it is globalized and adapted to local cultures These processes have occurred rapidly in the last two decades with relatively little reflection and examination This volume brings together contributors from a wide variety of disciplines to take a critical empirical look at bioethics around the globe examining how it is being transformed at both local and global levels in this process of cross cultural exporting and importing One concern is to identify sociocultural forces and consequences which may positively or negatively affect ethics and social justice goals This book thereby offers the first comparative anthropology and sociology of globalizing bioethics in the field exploring the global dissemination local adaptations cultural meanings and social functions of bioethics theories practices and institutions and comparing developed and developing countries The volume considers a full range of countries on every inhabited continent including Africa Asia Australia Central and South America Europe the Middle East and North America Topics include government agendas such as nationalism and nation building agendas of powerful associated professions e g medicine law theological and political

agendas such as culture wars agendas of entrepreneurial economies of profit and other cultural and ideological agendas consciously or unconsciously advanced or contested by bioethics work in particular countries based on their unique history politics and culture This cross cultural exploration of globalizing bioethics will be of great interest to a field that is increasingly introspective about its underlying sociocultural assumptions and biases At last an unabashedly sociological and anthropological look at the globalization of bioethics a really fresh approach to a maturing discipline The chapters speak from the perspective of sophisticated Western developed exporters of the bioethical paradigm and equally sophisticated Eastern developing and third world and interdisciplinary critics suspicious of the canonical view Trained in the dominant school of American mainstream philosophy Myser draws on her long standing commitment to a social and cultural approach to bioethics to take a fresh look at bioethics globally She grasps the globalization of bioethics and the skepticism about analytical philosophy's Americanized consensus The book sets the stage for a new era in bioethics theory and practice debating whether a universal common morality underlies the rich variation in national and cultural bioethics traditions Robert Veatch Georgetown University This path breaking volume is the first to explore the global export of Western bioethics to a variety of non Western settings Explicitly critical the book also points to the liberating potential of bioethics to achieve social justice and improve the lives of patients around the world The book is a must read for all medical anthropologists interested in bioethics Marcia Inhorn Yale University Bioethics Around the Globe should change the way bioethics is conceived and practiced in the U S and elsewhere Its rich and wide ranging comparative examination opens new possibilities for bioethical reflection I enthusiastically recommend this wonderful book James F Childress University of Virginia The past 40 years have seen a remarkable spread of bioethics to every part of the world Dr Myser's collection is a wonderful and rich exploration of its international impact revealing important similarities and differences from country to country It will have an important impact Daniel Callahan The Hastings Center

developments in biomedical technology and injustices in clinical care and research Since then bioethics has predominantly focused on respect for autonomy beneficence and nonmaleficence and the zero sum lifeboat ethics of distributive justice applying these principles almost exclusively within the walls of medical institutions It is now time for bioethics to take full account of the problems of health disparities and structural injustice that are made newly urgent by the COVID 19 pandemic and the effects of climate change This book shows why and how the field must embrace a broader and more meaningful view of justice principally by incorporating the tools and insights of the social sciences epidemiology and public health Nancy M P King Gail E Henderson and Larry R Churchill make the case for a more social understanding and application of justice a deeper humility in assessing expertise in bioethics consulting a broader and more relevant research agenda and greater appreciation of the profound health implications of global warming

Global Health Priority-Setting Ole Frithjof Norheim, Ezekiel J. Emanuel, Joseph Millum, 2020 Global health is at a crossroads The 2030 Agenda for Sustainable Development has come with ambitious targets for health and health services worldwide To reach these targets many more billions of dollars need to be spent on health However development assistance for health has plateaued and domestic funding on health in most countries is growing at rates too low to close the financing gap National and international decision makers face tough choices about how scarce health care resources should be spent Should additional funds be spent on primary prevention of stroke treating childhood cancer or expanding treatment for HIV AIDS Should health coverage decisions take into account the effects of illness on productivity household finances and children s educational attainment or just focus on health outcomes Does age matter for priority setting or should it be ignored Are health gains far in the future less important than gains in the present Should higher priority be given to people who are sicker or poorer Global Health Priority Setting provides a framework for how to think about evidence based priority setting in health Over 18 chapters ethicists philosophers economists policy makers and clinicians from around the world assess the state of current practice in national and global priority setting describe new tools and methodologies to address establishing global health priorities and tackle the most important ethical questions that decision makers must consider in allocating health resources
